I- INTRODUCTION 1

II- REVIEW OF LITERATURE 6

III- MATERIALS AND METHODS 45

IV- RESULTS AND DISCUSSIONS 55

   IV. I. Fruit creasing percentage: 55

   IV. II. Fruit quality: 61

      IV. II. 1. Fruit physical properties: 62

          Average fruit weight: 62

          Average fruit volume: 64

          Fruit peel thickness: 66

          Fruit dimensions: 69

          Fruit shape index: 72

      IV. II. 2. Fruit chemical properties: 75

          Fruit juice total soluble solids percent (TSS%): 75

          Fruit juice total acidity: 79

          Fruit juice total soluble solids: acid ratio (TSS/Acid ratio): 82

   IV. III. Nutritional status (leaf & fruit peel mineral composition): 86

      IV. III. 1. Leaf and fruit peel nitrogen content (N%): 86

      IV. III. 2. Leaf and fruit rind phosphorus content (P%): 90
IV. III. 3. Leaf and fruit rind Potassium content (K\%):

IV. III. 4. Leaf and fruit rind calcium content (Ca\%):

IV. III. 5. Leaf and fruit peel magnesium content (Mg \%):

IV. III. 6. Leaf and fruit rind manganese content (Mn ppm):

IV. III. 7. Leaf and fruit rind zinc content (Zn ppm):

IV. III. 8. Leaf and fruit rind cobalt content (Co ppm):

IV. IV. Activity of polygalacturonase (PG-ase) enzyme:

IV. V. Anatomical studies:

IV. V. A. Anatomical examination through earlier stages of fruit development:

IV. V. B. Anatomical development of fruit rind and creasing phenomenon in relation to investigated spray treatments:

V- SUMMARY AND CONCLUSION

VI. LITERATURE CITED
