

TABLE OF CONTENTS

Acknowledgement	I
Abstract	II
Table of Contents	IV
Nomenclature	VI
List of Figures	IX
1. Introduction	1
1.1. Introduction to 2-phase heat transfer	1
1.2. 3-phase contact line	1
1.3 Problem Definition and Objectives	2
2. State of the Art	4
2.1. Fundamental Aspects	4
2.1.1. Boiling and Evaporation Heat Transfer	4
2.1.2. Heat Transfer at the 3-Phase Contact Line	8
2.2. Theoretical and Numerical Models for the 3-Phase Contact Line Evaporation	12
2.3. Engineering Applications of Phase Change Heat Transfer	13
2.4. Experimental Investigation at The 3-Phase Contact Line	17
2.5. 3-Phase Contact Line In Boiling	23
2.5.1. Pool Boiling Heat Transfer	23
2.5.2. Flow Boiling Heat Transfer	27
3. Experimental Method and Apparatus	31
3.1. Basic Measurement Principle	31
3.2. Inera Red Thermography System	32
3.3. Experimental Setup Overview	33
3.3.1. Thermocouples calibration	37
3.3.2. Infrared Camera calibration	38
3.4. Heater Desgin	40
3.5. High Speed Camera Visulaisation Technique	42
3.6. Syringe Pump System	44
4. Data Processing	46
4.1. Inera Red Thermography Data Prosessing and Calibration	46
4.2. Heat Flux Calculation	48
4.3. Input Heat Flux Calculations	49
4.4. Meniscus Photos Data Processing	50
5. Results and Discussions	52
5.1. Stationary Meniscus Experiments	52
5.1.1. Local Temperature Distribution	52
5.1.2. Local Heat Flux Distribution	64
5.1.3. Instability of the 3-Phase Contact Line	66
5.2. Moving Meniscus Experiments	71
5.2.1. Local Temperature Distribution	72
5.2.2. Local Heat Flux Distribution	76
5.2.3. Effect of contact line velocity on the Maximum Local Heat Transfer	80

5.2.3.1. Contact line velocity for Single Bubble Model	84
5.2.3.2. Contact line velocity for Experimental Pool Boiling in Micro-Gravity	87
5.2.3.3. Influence of Contact Line velocity on Local Heat Transfer	88
6. Summary and Conclusions	91
7.Outlook	94
8.References	96
9.Appendices	106
9.1. Appendix I Thermocouples Calibration	106
9.2. Appendix II Uncertainty Calculations	109
9.3. Appendix III Sample of Experimental Results for Moving Meniscus Experiment	111
9.4. Appendix IV The Technical Properties of the Working Fluid HFE7100	172
