INTRODUCTION	1
REVIEW OF LITRATURE	2
A- Effect of water stress:	2
1- Growth characteristics	2
2- Yield and yield components	5
3- Chemical constituents	8
B- Varietal differences:	9
1- Growth characteristics	9
2- Yield and yield components	11
3- Chemical constituents	13
C- Protein fractination and isozymes electrophoresis	13
MATERIAL AND METHODS	15
RESULTS AND DISCUSSION	27
First topic: Effect of soil moisture depletion and varital response of maize on vegetative growth; yield and yield components as well as chemical constitutes	27
I- Flowering characteristics :	27
Time to 50% tasseling and silking	
II- Growth characteristics:	31
Plant height	31
Ear height	34
Stem diameter	35
Dry weight of leaf, stem and ear/plant.	37
III- Yield and its components:	42
Ear weight	42

Ear length	45
Ear diameter	46
Number of rows/ear	48
Number of grains/row	50
Grain weight/ear	51
100-grain weight	53
Grain yield	56
IV- Chemical constituents	59
Crude protein production	59
Total carbohydrate production	61
Oil production	62
Second topic: Testing seed quality for the original seed and produced grains:	65
A- Germination test.	65
B- Seedling emergence test.	67
C- Protein fractionation.	70
D- Isozymes electrophoresis.	76
SUMMARY	85
LITERATURE CITED	94
ARABIC SUMMARY	101
