INTRODUCTION.....	1
REVIEW OF LITERATURE.....	3
MATERIALS AND METHODS	23
EXPERIMENTAL RESULTS.....	38
Part I: Pathological Studies	38
I.1. Isolation and identification of the causal organism(s)	38
I.2. Pathogenicity test	39
I.3. Inoculum potential	41
I.4. Host range	44
I.5. Varietal reaction.....	46
Part II: Tissue culture experiments for induce somaclonal variation	48
II.1 Production of free-contaminated cotyledons	48
II.1.1. Effect of seed surface disinfectants.....	48
II.1.2. Effect of dual seed and cotyledon surface disinfectants	50
II.2. Production of the diploid adventitious shoots of two watermelon cultivars via direct organogenesis:.....	54
II.2.1. Effect of cytokinin type and concentrations on formation of the diploid adventitious shoots.....	54
II.2.2. Effect of different concentrations and combinations of IBA and BA on regeneration of the diploid watermelon plantlets	58
II.3. Effect of colchicine and dinitroalanine on production of the tetraploid watermelon plantlets	76
II.3.1. Growth characters of the regenerated tetraploid plantlets	76
II.3.2. Examination for inspecting tetraploid plants.....	80
II.4. Production of triploid (seedless) watermelon adventitious shoots via direct organogenesis	81
II.4.1. Germination of triploid seeds.....	81
II.4.2. Effect of cytokinin type and concentrations on the production of the adventitious shoots of seedless (triploid) watermelon.....	84
II.5. Production of diploid adventitious shoots via indirect organogenesis	86
II.5.1. Effect of different concentrations and combinations of BA and IBA on percentage of callus formation	86
II.5.2. Effect of naphthalene acetic acid (NAA) on callus differentiation.....	89

Part III: Screening for resistance against watermelon	
Fusarium wilt <i>in vitro</i>	92
III.1. Effect of different concentrations of cultural filtrate of the wilt pathogen on watermelon shoots	92
III.2. Evaluation of watermelon shoots regenerated from different explant sources for Fusarium wilt resistance.....	93
III.3. Regeneration of watermelon plantlets showing <i>in vitro</i> resistance against culture filtrate of the wilt pathogen.....	95
III.4. Acclimatization	97
III.5. Effect of greenhouse artificial infection by <i>F. oxysporum</i> -isolate No.2 on the <i>ex-vitro</i> resistance of the screened watermelon plants	99
III.6. Biochemical changes in watermelon shoots showing <i>in vitro</i> resistance against culture filtrates of the wilt pathogen	101
III.7. Isozyme analysis	103
III.8. Evaluation of diploid, triploid and tetraploid watermelon plants to Fusarium wilt under field conditions:	106
DISCUSSION	108
