INTRODUCTION 1
AIM OF INVESTIGATION 4

PART I

CHEMICAL ANALYSIS OF BANANA FRUIT

REVIEW OF LITERATURE 5
MATERIAL AND METHODS 10
Preparation of samples 10
Determination of edible portion percent 11
Chemical analysis : 11
(Moisture content, total-N, non-protein-N, protein-N, amino acids, ether extract, Ash content, calcium, iron, phosphorus, crude fiber, total sugars and starch, pectin, sugar, vitamin C, B ₁ and B ₂).	
RESULTS AND DISCUSSION 22

PART II

SOME ASPECTS ON THE THERAPEUTIC PROPERTIES AND BIOLOGICAL EVALUATION OF BANANA FRUIT.

BIOLOGICAL REVIEW 35
MATERIAL AND METHODS 39

	<u>Page</u>
I. Some therapeutic properties of banana 39
1. Perfusion fluids, drugs, and reagents used in pharmacological experiments 39
2. The methods used for detection of the pharmacologically active substances in banana preparations 42
3. Experimental animals 48
4. Methods used to examine the effect of banana extracts on the plain muscles in-vitro. 51
5. Methods used for examining the action of banana extracts on the circulatory and respiratory systems 54
6. Methods applied to examine the hormonal properties of banana extracts 61
7. The antibacterial effect of banana extracts 64
8. Methods utilized to study the antihelminthic properties of banana extracts in-vitro. 67
II. Biological evaluation of banana fruit 68
a) Protein efficiency ratio (P.E.R.) 68
b) Effect of banana on growth rate 73
c) The effect of banana on the weight of internal organs 74
RESULTS AND DISCUSSION 76
