INTRODUCTION	1
REVIEW OF LITERATURE	6
1. Daily dietary requirements of infants	6
1.2. Protein requirements.....	7
1.2. Carbohydrates and fats requirements	8
1.3. Caloric requirements	9
1.4. Minerals requirements	11
1.5. Vitamins requirements	13
2. Sources of baby foods	15
2.1. Cereals	15
2.2. Legume seeds	16
2.3. Oil seeds	18
2.4. Vegetable and fruits	19
3. Children food mixture	20
4. Inhibiting factors in baby foods based on legumes.	60
4.1. Distribution of protease inhibitors in legume seeds	60
4.2. Effect of soaking on trypsin inhibitors activity	61
4.3. Effect of heat treatment on trypsin inhibitor activity	63
5. Biological evaluation of protein quality	66
MATERIALS AND METHODS	72
1. Materials	72
1.1. Cereals	72
1.2. Legumes	72
1.3. Oil seeds	72
1.4. Fresh vegetables	72
1.5. Skim milk powder	72
2. Methods	73
2.1. Preparation of the different materials	73

	PAGE
2.2. Composition of the children food formulated..	74
2.3. Chemical analysis	74
2.3.1. Proximate chemical composition	74
2.3.2. Total calorific	74
2.3.3. Determination of minerals content in in children food mixture	76
2.3.4. Determination of amino acids	76
2.3.5. The protein chemical score	78
2.3.6. Determination of A/E ratio	78
2.3.7. Trypsin inhibitor activity assay	79
2.3.8. Identification and determination of fatty acids	80
2.4. Biological assays for children food mixtures	81
2.4.1. Diet composition	82
2.4.2. Test animals	85
2.4.3. Determination of feed efficiency (FE) and protein efficiency ratio (PER)....	85
2.4.4. Determination of net protein utilizat- ion (NPU), digestibility coefficient (DC) and biological value (BV)	86
3. Bacteriological examination	89
4. Organoleptic tests	89
5. Estimates of costs	89
RESULTS AND DISCUSSION	91
I. Chemical composition of raw materials and formu- lated children food mixtures	91
A. Chemical composition of the raw materials.....	91
B. Chemical composition of the ten formulated food mixtures	94
C. Calculated calorific values of the formulated children food mixtures	98
II. Minerals content of the formulated children food mixtures	101

	PAGE
III. Amino acid content and protein scores.....	107
1. Amino acid composition of the formulated children food mixtures	107
2. Chemical protein score of the formulated children food mixtures	114
IV. Fatty acids composition of children food mixtures	119
1. Identification of the fatty acids	119
2., Fatty acid composition of the formulated mixtures	119
V. Biological assays and its interpretation in terms of biological values of the formulated children food mixtures	123
1. Weight gain and total food and protein consumption	124
2. Feed efficiency (FE)	126
3. Protein efficiency ratio (PER)	127
4. Net protein utilization (NPU)	129
5. Net protein ratio (NPR)	130
6. Digestibility coefficient (DC).....	132
7. Biological value (BV)	134
VI., Determination of trypsin inhibitor activity in the raw and treated legumes and formulated mixtures	137
1., Trypsin inhibitor activity in the raw and treated legumes used in mixtures preparations..	137
2., Trypsin inhibitor activity in the formulated children food mixtures	140
VII. Microbiological examination of the formulated children food mixtures	142
VIII. Organoleptic quality of children food mixtures ..	143
IX. Costs of the children food mixtures	145
