| <b>INTRODUCTION</b>                                       | 1    |
| <b>REVIEW OF LITURATURE</b>                               | 3    |
| 1. Quality attributes of fresh fish (nutritional quality) | 3    |
| 2. Smoking                                                | 4    |
| 2.1. Smoke                                                | 4    |
| 2.2. Smoking methods                                      | 5    |
| 2.2.1. Cold-smoking                                       | 5    |
| 2.2.2. Hot-smoking                                        | 6    |
| 2.2.3. Elctrostatic-smoking                               | 6    |
| 2.2.4. Liquid-smoking                                     | 6    |
| 2.3. Evaluation of smoked fish                            | 7    |
| 2.3.1. Nutritional evaluation                             | 7    |
| 2.3.2. Physico-chemical evaluation                        | 9    |
| 3. Canning                                                | 11   |
| 3.1. Nutritional evaluation of canned fish                | 11   |
| 3.1.1. Canning effect on the chemical composition of fish | 11   |
| 3.1.2. Physico-chemical evaluation                        | 12   |
| 3.2. Raw material for canning fish                        | 14   |
| 4. Antioxidants                                           | 15   |
| 5. Organoleptic evatualtion                               | 16   |
| <b>MATERIALS AND METHODS</b>                              | 19   |
| 1. Materials                                              | 19   |
| 1.1. Fish samples                                         | 19   |
| 1.2. Sawdust                                              | 19   |
| 1.3. Sodium chloride                                      | 19   |
| 1.4. Oil                                                  | 19   |
| 1.5 Aromatic herbs                                        | 19   |
| 2. Methods                                                | 20   |
| 2.1. Experimental methods                                 | 20   |
| 2.1.2. Preparation of aromatic herbs                      | 20   |
| 2.1.3. Preparation of flavored oil                        | 20   |
| 2.2. Technological methods                                | 21   |
| 2.2.1. Smoking process                                    | 21   |
| 2.2.2. Canning process                                    | 21   |

|                                                                       | Page |
|-----------------------------------------------------------------------|------|
| 2.3. Analytical methods                                               | 21   |
| 2.3.1. Moisture content                                               | 21   |
| 2.3.2. Crude protein content                                          | 21   |
| 2.3.3. Ether extract content                                          | 22   |
| 2.3.4. Ash content                                                    | 22   |
| 2.3.5. Determination of amino acids (A.A.)                            | 22   |
| 2.3.6. Calculated of G.D.R.                                           | 22   |
| 2.3.7. Sodium chloride content                                        | 22   |
| 2.3.8. Total volatile nitrogen (T.V.N.)                               | 22   |
| 2.3.9. Trimethylamine (T.M.A.) and free amino nitrogen (F.A.N.)       | 23   |
| 2.3.10. Ammonia nitrogen content ( $\text{NH}_3\text{-N}$ )           | 23   |
| 2.3.11. Thiobarbituric acid (T.B.A.)                                  | 23   |
| 2.3.12. Water holding capacity (W.H.C.) and plasticity                | 23   |
| 2.3.13. Phenol determination                                          | 23   |
| 2.3.14. Determination of carbonyl compounds                           | 23   |
| 2.3.15. Determination of fatty acid (F.A.)                            | 23   |
| 2.3.16. Organoleptic evaluation                                       | 24   |
| <b>RESULTS AND DISCUSSION</b>                                         | 25   |
| A. Sardine fish                                                       | 25   |
| 1. Nutritional evaluation of smoked-Sardine products                  | 25   |
| 1.1. Chemical composition of frozen and smoked Sardine fish products  | 25   |
| 1.2. Physico-chemical evaluation of smoked-Sardine fish products      | 29   |
| 1.3. Effect of smoking on protein quality of Sardine fish             | 32   |
| 2. Organoleptic evaluation of smoked sardine products                 | 38   |
| B. Silver carp fish                                                   | 41   |
| 1. Chemical composition of fresh and canned Silver carp fish products | 41   |

|                                                                                                           | <b>Page</b> |
|-----------------------------------------------------------------------------------------------------------|-------------|
| 2. Physico-chemical evaluation of fresh and canned Silver carp fish                                       | 45          |
| 2.1. Water holding capacity (W.H.C.) and plasticity                                                       | 45          |
| 2.2. pH value                                                                                             | 47          |
| 2.3. Thiobarbituric acid (T.B.A.) value                                                                   | 49          |
| 2.4. Total volatile basic nitrogen (TVB-N)                                                                | 50          |
| 2.5. Trimethylamine nitrogen (TMA-N)                                                                      | 51          |
| 2.6. Ammonia nitrogen (NH <sub>3</sub> -N)                                                                | 51          |
| 3. Fat quality of fresh and canned Silver carp fish                                                       | 52          |
| 3.1. Fatty acids profile of Silver carp fish as affected by<br>canning il oil and different aromatic oils | 52          |
| 4. Organoleptic evaluation of canned silver carp fish in jar                                              | 57          |
| <b>V. SUMMARY</b> .....                                                                                   | 61          |
| <b>VI. REFERENCES</b> .....                                                                               | 67          |
| <b>VII. ARABIC SUMMARY</b> .....                                                                          |             |
