INTRODUCTION	1
REVIEW OF LITERATURE	8
Part I: Chemical and physical properties of fish muscles:	8
* Chemical composition.	
* Effect of frozen storage on degradation of trimethylamine oxide	9
* Texture changes during frozen storage.	14
* Color of fish muscle.	17
Part II: Effect of storage at -20 on the functional properties of fish proteins:	20
* Protein solubility.	20
* Apparent viscosity.	23
* Emulsifying Capacity.	25
* Emulsion Stability.	28
Part III: Effect of frozen storage on the extractability of natural actomyosin (NAM).	30
* Changes in electrophoretic pattereden of extractable natural actomyosin during frozen storage.	32
* Emulsifying properties of natural actomyosin.	35
Part IV: Electron microscopic observation.	38
 MATERIALS AND METHODS:	 41
A) MATERIALS	41
B) CHEMICAL ANALYSIS:	42
B.1. Moisture, crude protein, and ash.	42
B.2. Crude fat.	42
B.3. pH value.	42
B.4. Determintion of dimethylamine.	43
B.5. Formaldehyde content.	43

II

C) PHYSICAL MEASUREMENT:	44
C.1. Texture	44
C.2. Color	44
D) FUNCTIONAL PROPERTIES:	45
D.1. Protein solubility.	45
D.2. The total protein of mince homogenate.	45
D.3. Apparent viscosity.	46
D.4. Emulsifying capacity.	46
D.5. Emulsion stability.	46
E) NATURAL OF ACTOMYOSIN (NAM):	47
E.1. Extractability of NAM.	47
E.2. Emulsifying properties:	48
E.2.a. Emulsion activity Index (EAI).	48
E.2.b. Emulsion stability Index (ESI).	49
E.3. Polyacrylamide gel electrophoresis of NAM (S1).	49
E.4.a. Extractability of aggregates (P1 Fraction).	50
E.4.b. Polyacrylamide gel of electrophoresis of (S2).	50
D) Transmission electron microscopy.	51
F) Statistical analysis.	51
RESULTS AND DISSCUSSION:	54
Part I: Chemical and physical properties:	54
* Chemical composition.	54
* pH value.	56
* Dimethylamine.	60
* Formaldehyde.	68
* Texture.	76
* Color.	83
Part II: Effect of frozen storage at -20°C on the functional properties of proteins of minced fish.	94
* Changes in protein solubility.	94
* The total protein content of the homogenate.	101

III

* Changes in apparent viscosity.	108
* Changes in emulsifying capacity.	115
* Changes in emulsion stability.	122
 Part III: Effect of frozen storage at -20°C on the natural actomyosin (NAM):	129
A.1. Extractability of natural actomyosin (S1 Fraction).	129
A.2. Electrophoretic pattern of natural actomyosin (S1 fraction).	135
A.3. Emulsifying properties of natural actomyosin (S1 Fraction).	144
 B.1. Extractability of precipitated aggregates (P1 Fraction).	152
B.1.a. Breaking down the secondary interactions.	153
* Treatment with 2 % SDS.	153
* Treatment with 2 % SDS + 8M Urea.	153
B.1.b. Breaking down secondary interaction and disulfide bonds.	156
* Treatment with 2 % SDS + 5 % β -mercapto- ethanol (ME).	156
B.2. Polyacrylamide Gel Electrophoresis (S2 Fraction).	158
* Protein extracted with 2 % SDS.	158
* Protein extracted with 2 % SDS + 8 M Urea.	160
* Protein extracted with 2 % SDS + 5 % β - mercaptoethanol (ME).	163
 Part IV: Transmission electron microscopy (TEM):	167
* Muscle morphology.	167
* Morphology of natural actomyosin (S1 Fraction).	167
* Morphology of precipitate residual of natural actomyosin (P1 Fraction).	173
 SUMMARY.	180
ARABIC SUMMARY
