I	INTRODUCTION	1
II	REVIEW OF LITERATURE	3
	II.1. Some Factors affecting rooting of stem cuttings.....	3
	II.1.1. Effect of botanical relationship on root ability of cuttings.....	3
	II.1.2 . Effect of collection date of year at which the cuttings are taken.....	4
	II.1.3. Effect of IBA concentration on rooting cutting...	11
	II.1.4. Effect of wounding on rooting cuttings.....	16
	II.1.5. Anatomical structure affecting rooting of cuttings	20 25
	II.2. Some factors affecting propagation by air-layering	
	II.2.1. Effect of time of air-layering on root-ability of layers	25
	II.2.2. Effect of indole butyric acid (IBA) on rooting of layers	26
III	MATERIALS AND METHODS	28
IV	RESULTS AN DISCUSSION	34
	IV.1. Propagation of apple rootstocks by stem hardwood cutting	34 34
	IV.1.1. Rooting percentage of apple rootstock cuttings.....	38
	IV.1.2. Number of developed roots per cutting	44
	IV.1.3. Average root length.....	47
	IV.1.4. Survival percentage	50
	IV.1.5. Number of leaves per rooted cutting	53
	IV.1.6. Shoot length per cutting	56
	IV.1.7. Leaves dry weight of survived rooted cutting	58
	IV.1.8. Stem dry weight of survived rooted cuttings	61
	IV.1.9. Root dry weight of survived rooted cuttings	63
	IV.1.10. Total plant dry weight of survived rooted cuttings ..	66
	IV.2. Propagation of apple rootstocks by air-layering	66
	IV.2.1 The percentage of rooted air-layers	69
	IV.2.2. Number of developed roots per plant	73
	IV.2.3. Root length	75
	IV.2.4. Stem length	78
	IV.2.5. Number of leaves pear-layer	81
	IV.2.6. Leaves dry weight of air-layer	

	IV.2.7. Stem dry weight of air-layer	84
	IV.2.8. Root dry weight of air-layers	84
	IV.2.9. Total plant dry weight of air-layers	87
		89
V	SUMMARY AND CONCLUSION	97
VI	LITERATURE CITED	103
	ARABIC SUMMARY
