INTRODUCTION	1
REVIEW OF LITERATURE	5
A. Chemical composition of raw materials	5
B. Antinutritional components	6
1. Chemical and biological characters	6
1.1. Phytic acid	6
1.2. Trypsin inhibitor	6
1.3. Vicine and convicine	7
2. Distribution of protease inhibitors in legume seeds	10
3. Effect of soaking on antinutritional components	12
3.1. Phytic acid	12
3.2. Trypsin inhibitor	12
4. Effect of germination on antinutritional components	14
4.1. Phytic acid	14
4.2. Trypsin inhibitor	16
5. Effect of heat treatment on antinutrition components	17
5.1. Phytic acid	17
5.2. Trypsin inhibitor	18
C. Tempeh preparation from different sources	21
D. Propagation and preservation of <u>Rhizopus oligosporus</u> spores	25
E. Chemical composition of tempeh	27
F. Effect of tempeh processing on antinutritional components	31
6.1. Phytic acid	31
6.2. Trypsin inhibitor	33
G. Effect of tempeh processing on nutritive value.....	35
H. Sensory evaluation of tempeh product	38

	PAGE
MATERIALS AND METHODS	41
1. Materials	41
1.1. Raw materials	41
1.2. Culture of microorganisms	41
1.3. Media used for fungal growth	41
2. Methods	42
2.1. Propagation of fungi culture	42
2.2. Preparation of spore suspension	42
2.3. Seeds processing for tempeh production	42
2.3.1. Soaking in acidified water	42
2.3.2. Germination process of seeds	43
2.4. Preparation of fermented food products	44
2.4.1. Tempeh preparation	44
2.4.2. Tempeh with green spices	44
2.5. Preparation of "Taameia"	45
2.6. Analytical methods	46
2.6.1. Determination of proximate chemical composition	46
2.6.2. Determination of pH	47
2.6.3. Determination of chemical freshness parameters	47
2.6.4. Determination of antinutritional components	47
2.6.5. Determination of mineral content	52
2.6.6. Determination of phosphorus content	52
2.6.7. Determination of fatty acids	52
2.6.8. Statistical analysis	54
RESULTS AND DISCUSSION	58
<u>Part I</u> : Effect of some pretreatments (soaking and germination) on the chemical composition and antinutritional components of soybean and faba bean cotyledons.....	58
1. Chemical composition of raw material	58

	PAGE
2. Distribution of chemical constituents in cotyledons and hull of soybean and faba bean	61
3. Effect of soaking and germination on chemical composition of soybean and faba bean cotyledons	63
4. Effect of cooking on chemical composition of soybean and faba bean cotyledons	67
5. Antinutrition factors	72
5.1. Antinutrition content of raw materials	72
5.2. Distribution of antinutritional factors in cotyledons and hull of soybean and faba bean	75
5.3. Effect of soaking on antinutritional components of soybean and faba bean cotyledons	75
5.4. Effect of cooking on antinutritional factors of soybean and faba bean cotyledons	80
<u>Part II</u> : Optimization of factors affecting fermentation in production of tempeh from soybean and faba bean cotyledons	83
1. Changes in chemical composition of soybean or faba bean tempehs	83
1.1. Changes in moisture content	84
1.2. Changes in crude protein	87
1.3. Changes in non protein nitrogen	91
1.4. Changes in true protein	96
1.5. Changes in ether extract	100
1.6. Changes in ash content	105
1.7. Changes in fiber content	109
1.8. Changes in available carbohydrates	113
1.9. Changes in pH value	117
2. Changes in quality index	121
2.1. Changes in total volatile nitrogen	121
2.2. Changes in ammonia	126
2.3. Changes in thiobarbituric acid	130

	PAGE
3. Changes in antinutritional components	134
3.1. Changes in phytic acid	134
3.2. Changes in trypsin inhibitor activity	140
3.3. Changes in total vicine content	145
<u>Part III</u> : Chemical propertis of tempeh products as affected by mixing with green spices and frying compared with "Taameia"	152
1. Changes in chemical composition	152
2. Changes in chemical freshness parameters	157
3. Changes in antinutritional factors	161
<u>Part IV</u> : Nutritional evaluation of "Taameia" and tempeh products	167
1. Mineral content	167
2. Fatty acid composition	173
3. Sensory evaluation	177
