|--------------------------------------------------------------------------------------------------------------------------------------------------|------|
| INTRODUCTION.....                                                                                                                                | 1    |
| REVIEW OF LITERATURE .....                                                                                                                       | 7    |
| 1- Effect of gibberellic acid (GA <sub>3</sub> ) on germination and seedling growth .....                                                        | 7    |
| 2- Effect of cold stratification on seed germination and seedling growth .....                                                                   | 11   |
| 3- Effect of gibberellic acid combined with seed stratification on seed germination and seedling growth.....                                     | 13   |
| 4- Other factors being related with the rest phenomena in seeds.....                                                                             | 14   |
| 5- Yeast extract preparation as a new material for breaking dormancy in seeds...                                                                 | 15   |
| MATERIAL AND METHODS .....                                                                                                                       | 17   |
| RESULTS AND DISCUSSION .....                                                                                                                     | 30   |
| I- Chemical analysis of some bioconstituents in stratified and unstratified seedling of Magnolia plants.....                                     | 30   |
| II- Germination process of Magnolia seeds and seedling emergence.....                                                                            | 42   |
| 1 - Unstratified seeds and treated with gibberellic acid (GA <sub>3</sub> ), yeast extract (YE) or naphthalene acetic acid (NAA) treatments..... | 47   |
| a- Plant height:.....                                                                                                                            | 47   |
| b- Leaves characters .....                                                                                                                       | 51   |
| 2- Pre-stratified seeds and treated with gibberellic acid (GA <sub>3</sub> ), yeast extract (YE) or naphthalene acetic acid (NAA) treated:.....  | 54   |
| a- Plant height.....                                                                                                                             | 54   |
| b- Leaves characters .....                                                                                                                       | 59   |
| III- Growth behaviour at 18 months of plant age:.....                                                                                            | 61   |
| 1- Vegetative growth.....                                                                                                                        | 61   |
| a- Plants grown up from unstratified seeds.....                                                                                                  | 66   |
| b- Plants grown up from stratified seeds.....                                                                                                    | 71   |
| 2- Dry matter partitioning and distribution.....                                                                                                 | 71   |
| a- Plants grown up from unstratified seeds.....                                                                                                  | 74   |
| b- Plants grown up from stratified seeds.....                                                                                                    | 75   |
| VI- Effect on chloroplast pigments in leaves, and some bioconstituents in different plant organs.....                                            | 80   |
| 1- Chloroplast pigments.....                                                                                                                     | 80   |
| 2- NPK and some bioconstituents.....                                                                                                             | 80   |
| a- NPK content.....                                                                                                                              | 80   |
| b- Some bioconstituents.....                                                                                                                     | 84   |
| SUMMARY AND CONCLUSION.....                                                                                                                      | 89   |
| REFERENCES .....                                                                                                                                 | -    |
| ARABIC SUMMARY .....                                                                                                                             | -    |
