- ACKNOWLEDGEMENT	
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	4
2.1. Sunflower (seeds or meal) as a prospective ingredient in formulating poultry rations	4
2.1.1. Chemical composition and nutritive value of sunflower seeds and meal.....	4
2.1.2. Effect of different heat processing on the nutritive value of sunflower seeds and meal.....	8
2.1.3. Effect of applying graded levels of sunflower in poultry rations.....	9
2.2. Comparison of sunflower with some other oil crops in poultry rations	12
2.2.1. Comparative value of sunflower seed oil meal and soyabean oil meal.....	12
2.2.2. Comparative of sunflower and ground-nut cakes.	13
2.2.3. Sunflower oil meal and rapseed oil meal as replacement for soyabean oil meal.....	14
2.3. Effect of mutual supplementation with plant proteins on poultry diets and its economical efficiency	15
2.4. Carcass characteristics	15
2.5. Serum blood constituents	19

	<u>Page</u>
3. MATERIAL AND METHODS.....	29
3.1. Birds, their management and experimental design...	29
3.1.1. The first experiment	29
3.1.2. The second experiment	32
3.2. Treatments and processing methods of sunflower seeds	33
3.3. Parameters estimated and collection of data	34
3.3.1. Determination of the digestible coefficient of nutrients.....	34
3.3.2. Determination of metabolizable energy of diets.	35
3.3.3. Average body weight and weight gain.....	36
3.3.4. Feed intake and feed efficiency.....	36
3.3.5. Mortality rate	37
3.4. Slaughtering and carcass characters	37
3.5. Serum blood constituents	39
3.6. Statistical analysis	43
4. RESULTS AND DISCUSSION	49
4.1. First experiment.....	49
4.1.1. Proximate analysis of sunflower raw and proce- ssed seed as well as meal.....	49
4.1.2. Evaluation of total protein efficiency of sun- flower raw and processed seeds and meal.....	53

	<u>Page</u>
4.1.3. Digestion coefficient and metabolizable energy for rations applied of total protein efficiency determination.....	58
4.1.4. Metabolic parameters in blood serum.....	64
4.2. Second experiment.....	90
4.2.1. Live weight and weight gain.....	90
4.2.2. Feed intake and feed efficiency.....	95
4.2.3. Parameters of carcass quality.....	99
4.2.3.1. Killing, deressing and eviscerating losses	99
4.2.3.2. Absolute and proportional weight of edible meat, carcass and giblets.....	104
4.2.4. Metabolic parameters in blood serum.....	108
4.2.5. Mortality rate.....	131
