| INTRODUCTION.....                                    | 1         |
| REVIEW OF LITERATURE.....                            | 3         |
| MATERIALS AND METHODS.....                           | 19        |
| RESULTS AND DISCUSSION .....                         |           |
| <b>I. Greenhouse Experiment.....</b>                 | <b>31</b> |
| 1-No. of galls.....                                  | 31        |
| 2-No of eggs.....                                    | 35        |
| 3- Reproduction (R) factor.....                      | 40        |
| <b>II.Field Experiment.....</b>                      | <b>42</b> |
| 1. Number of days from transplanting to first flower | 42        |
| 2. Fruit set percentages .....                       | 53        |
| 3. Number of fruits /plant.....                      | 56        |
| 4. fruit weight.....                                 | 58        |
| 5. Plant yield.....                                  | 61        |
| 6. Detached leaves fresh weight.....                 | 65        |
| 7. Number of branches/plant.....                     | 71        |
| 8. plant height.....                                 | 76        |
| 9. Root fresh weight.....                            | 78        |
| 10.Root phenols content.....                         | 80        |
| 11.Leaf chlorophyll content.....                     | 87        |
| <b>III.Penetration bioassay experiment.....</b>      | <b>92</b> |
| <b>IV.Resistance bioassay experiment.....</b>        | <b>96</b> |
| SUMMARY.....                                         | 100       |
| REFERENCES.....                                      | 111       |
| Appendix.....                                        | 123       |
