INTRODUCTION	1
REVIEW OF LITERATURE.....	3
MATERIALS AND METHODS	28
EXPERIMENTAL RESULTS.....	44
-Survey and frequencies of different fungi isolated from maize grains	44
-Effect of infested maize grains with <u>Fusarium moni-</u> <u>liforme</u> and <u>Nigrospora oryzae</u> under different tempe- ratures, moisture content percentages and storage intervals on the percentage of disease (Pathogeni- city) and disease severity :.....	46
-Effect of infested maize grains with <u>Fusarium monili-</u> <u>forme</u> or <u>Nigrospora oryzae</u> , under different tempera- tures, moisture content percentages and storage inter- vals on the percentage of maize grains components (germ, hull and endosperm):	50
The effect of infection of maize grains with <u>Fusarium</u> <u>moniliforme</u> or <u>Nigrospora oryzae</u> under different temperature degrees, storage intervals and moisture percentage contents on:	
- Fat content of maize grains	53
- Free fatty acids	57
- Fatty acid values	62
- Reducing sugars	66
- Non-reducing sugars	71
- Total sugars	76
- Free phenol	80
- Congjugated phenol	84
- Total phenols	89
- Effect of artificial inoculation with <u>Fusarium monili-</u> <u>forme</u> and <u>Nigrospora oryzae</u> on protein percentage after 10 and 20 days using Giza 2 and Pioneer varieties	93
-Identification of different spores adhering on the outer surfaces of stored maize grains	94
-Isolation of different fungi attaching maize grains as noticed by their distinct symptoms on the diseased or discoloured grains.....	97
