1. INTRODUCTION	1
2. REVIEW OF LITERATURE.....	3
2.1. Factors affecting growth and production of cultured fish.....	3
2.1.1. Fish species.....	3
2.1.1.1. The Tilapias.....	3
2.1.1.1.1. Geographical distribution of Tilapias.....	3
2.1.1.1.2. Aquaculture world production.....	4
2.1.1.1.3. Factors affecting physiological activities of tilapia.....	4
2.1.1.1.4. Growth capacity.....	6
2.1.1.1.5. Reproduction and fecundity.....	6
2.1.1.1.6. Sex determination.....	7
2.1.1.1.7. Feeding habits.....	7
2.1.1.2. Silver carp.....	8
2.1.1.2.1. Aquaculture world production.....	8
2.1.1.2.2. Feeding habits.....	8
2.1.2. Stocking rate.....	10
2.1.3. Systems of fish culture.....	13
2.1.4. Food, feeding and fertilization of fish ponds.....	16
2.1.4.1. Natural food.....	16
2.1.4.1.1. Enhancement of fish ponds production by fertilization.....	17
2.1.4.1.1.1. Inorganic fertilization.....	17
2.1.4.1.1.2. Organic fertilization.....	18
2.1.4.2. Artificial feeds.....	25
2.1.4.2.1. Energy requirements and sources.....	25
2.1.4.2.1.1. Protein requirements.....	25
2.1.4.2.1.2. Lipids and fatty acids requirements.....	27
2.1.4.2.1.3. Carbohydrates requirements.....	28
2.1.4.2.1.4. Dietary energy : Protein ratio.....	29
2.1.4.2.2. Minerals.....	30
2.1.4.2.3. Vitamins.....	31
2.2. Carcass traits.....	32
2.2.1. Endogenous factors affecting carcass traits.....	32
2.2.2. Exogenous factors affecting carcass traits.....	33
2.3. Chemical composition of fish.....	36
2.3.1. Endogenous factors affecting proximate composition.....	37
2.3.2. Exogenous factors affecting proximate composition.....	38
2.4. Triploidy.....	45
2.4.1. Triploidy induction.....	47
2.4.2. Effect of triploidy on survival rate.....	49
2.4.3. Effect of triploidy on cell size.....	49
2.4.4. Effect of triploidy on hematological characteristics.....	50
2.4.5. Effect of triploidy on blood oxygen content.....	50
2.4.6. Effect of triploidy on sexual maturation and reproduction.....	50
2.4.7. Effect of triploidy on growth traits.....	51
2.4.8. Effect of triploidy on carcass traits.....	53
2.4.9. Effect of triploidy on chemical composition.....	53
3. MATERIALS AND METHODS.....	54
3.1. First experiment.....	54

3.1.1. Location and period.....	54
3.1.2. Fish used.....	54
3.1.3. Experimental ponds and stocking rate.....	54
3.1.4. Management of ponds.....	55
3.1.5. Carcass traits.....	58
3.1.6. Chemical analysis of fish.....	59
3.2. Second experiment.....	60
3.2.1. Location.....	60
3.2.2. Source of parental stock.....	60
3.2.3. Triploidy induction.....	60
3.2.4. Triploidization assessment.....	62
3.2.5. Fry rearing and on-growing.....	62
3.2.5. Fish samples and measurements.....	63
3.2.6. Water quality.....	63
3.3. Statistical analysis.....	64
4. RESULTS AND DISCUSSION.....	65
4.1. First experiment.....	65
4.1.1. Growth traits.....	65
4.1.1.1. Body weight.....	65
4.1.1.2. Total yield.....	69
4.1.1.3. Specific growth rate.....	73
4.1.1.4. Body length and depth.....	75
4.1.1.5. Condition factor.....	80
4.1.1.6. Correlation coefficient between body measurements.....	81
4.1.2. Carcass traits.....	84
4.1.2.1. Nile tilapia.....	84
4.1.2.2. Silver carp.....	87
4.1.2.3. Correlation coefficients between body measurements and carcass traits.....	89
4.1.3. Chemical composition of flesh.....	90
4.1.3. 1. Nile tilapia.....	90
4.1.3. 2. Silver carp.....	93
4.1.3.3. Correlation coefficients between body measurements and chemical composition of flesh.....	95
4.1.4. Chemical composition of by-products.....	96
4.1.4.1. Nile tilapia.....	96
4.1.4.2. Silver carp.....	98
4.1.4.3. Correlation coefficients between body measurements and chemical composition of by-products.....	100
4.2. Second experiment.....	101
4.2.1. Fry production.....	101
4.2.2. Body measurements.....	101
4.2.3. Growth traits.....	102
4.2.4. Feed conversion ratio.....	102
4.2.5. Gonadal development.....	104
4.2.6. Hepatosomatic index.....	105
4.2.7. Carcass traits.....	105
4.2.8. Chemical analysis.....	106
5. SUMMARY.....	107
6. REFERENCES.....	113
ARABIC SUMMARY
