LIST OF TABLES.....	I
LIST OF FIGURES.....	III
1- INTRODUCTION.....	1
2- REVIEW OF LITERATURE.....	3
3- MATERIALS AND METHODS.....	55
4- RESULTS AND DISCUSSION.....	64
4-1- Propagation by cuttings.....	64
4-1-1- Effect of wounding and some growth regulators.....	64
4-1-1-1- Softwood cuttings.....	64
4-1-1-2- Hard wood cuttings.....	76
4-1-2- Anatomy of adventitious root origin.....	82
4-2- Propagation by budding.....	96
4-2-1-a- Effect of rootstock and time of budding on growth of Ne Plus Ultra almond budlings.....	96
4-2-1-b- Specific effect of rootstock on the performance of Ne Plus Ultra almond budlings.....	98
4-2-2- Performance of unbudded stocks.....	101
4-2-3- Leaf elements content.....	103
4-2-3-1- Budded plants.....	103

	<u>Page</u>
4-2-3-1-a- Effect of rootstock and time of budding on elements content of Ne Plus Ultra almond budlings.....	103
4-2-3-1-b- Specific effect of rootstocks on the macro-elements content in leaves of Ne Plus ultra almond budlings.	107
4-2-3-2- Unbudded stock plants.....	110
4-2-4- Anatomy of budunion zone.....	112
4-3- Tissue culture studies.....	118
4-3-1- Effect of explant preparation time on the performance of shoot-tip and one-node cuttings of three almond rootstocks.....	118
4-3-1-1- Establishment stage.....	118
4-3-1-2- Proliferation stage.....	125
4-3-1-3- Rooting stage.	131
5- SUMMARY AND CONCLUSIONS.....	134
6- LITERATURE CITED.....	143
ARABIC SUMMARY.	165

LIST OF TABLES

<u>Table</u>	<u>Page</u>
1- Response of Marianna 2624 plum softwood cuttings, planted under mist, to wounding and some growth regulator treatments (prepared in May 1992 & 1993).....	65
2- Response of Okenawa peach softwood cuttings, planted under mist, to wounding and some growth regulators treatments (prepared in May 1992 & 1993).	66
3- Response of Marianna 2624 plum softwood cuttings, planted under mist, to wounding and some growth regulator treatments (prepared in July 1992 & 1993).	69
4- Response of Okenawa peach softwood cuttings, planted under mist, to wounding and some growth regulator treatments (prepared in July 1992 & 1993).....	70
5- Specific effect of softwood cuttings preparation time on the rooting and survival percentages of Okenawa peach and Marianna 2624 plum (Average of two years 1992 & 1993).....	75
6- Response of Marianna 2624 plum hardwood cuttings to wounding and some growth regulator treatments (prepared in December 1992 & 1993).....	77
7- Response of Okenawa peach hardwood cuttings to wounding and some growth regulator treatments (prepared in December 1992 & 1993).....	78

<u>Table</u>	<u>Page</u>
8- Growth of Ne Plus Ultra almond budlings as affected by rootstocks and time of budding.	97
9- Nursery performance of Ne Plus Ultra almond budded on different rootstocks.	99
10- Nursery performance of unbudded rootstock nurslings.	102
11- Leaf nutrient elements content of Ne Plus Ultra almond budlings as affected by rootstocks and time of budding.....	104
12- Specific effect of rootstock on macro-nutrient content in leaves of Ne Plus Ultra budlings (1992/ 1993).....	108
13- Leaf macro element content of rootstock nurslings.	111
14- Effect of explant preparation time on the performance of shoot-tip and one-node cuttings during the establishment stage of three almond rootstocks.	119
15- Effect of explant preparation time on the performance of shoot-tip and one-node cuttings during the proliferation stage of three almond rootstocks.	126

LIST OF FIGURES

<u>Figure</u>	<u>Page</u>
1- A cross section in Marianna 2624 plum stem cutting.....	83
2- A cross section in Okenawa peach stem cutting.....	84
3- A cross section in bitter almond stem cutting.....	85
4- A cross section in Marianna 2624 plum stem cutting showing root primordia and well developed roots.....	86
5- A cross section in Okenawa peach stem softwood cutting showing an early stage of root primordia.....	87
6- A cross section in bitter almond stem cutting showing an early stage of root primordia.....	88
7- A cross section in Okenawa peach stem cutting showing the beginning of vascular bundle connection between adventitious root and corresponding tissues of the cutting.....	90
8- A cross section in Okenawa peach stem cutting showing the penetration of the adventitious roots through the cutting tissues and its connection with the main conductive tissues. ..	91
9- A cross section in Marianna 2624 plum stem cutting showing a well developed adventitious roots and their penetration through the cutting tissues.....	93

<u>Figure</u>	<u>Page</u>
10- A cross section in Okenawa peach stem cutting showing a well developed adventitious roots and their penetration throughout the cutting tissues.....	94
11- Effect of rootstocks and time of budding on elements content of Ne Plus Ultra almond budlings.	
a- Nitrogen.	105
b- Phosphorus.	105
c- Potassium.	105
d- Calcium.	106
e- Magnesium.	106
12- A longitudinal section in the bud-union of Ne Plus Ultra almond grown on bitter almond rootstock.....	113
13- A longitudinal section in the bud-union of Ne Plus Ultra almond grown on Okenawa peach rootstock.	114
14- A longitudinal section in the bud union of Ne Plus Ultra almond grown on Marianna 2624 plum rootstock.	116
15- Effect of explant preparation time on the performance of shoot-tip and one-node cuttings grown on modified MS medium free from hormones during the establishment stage of three almond rootstocks.	120
16- Shoot-tip of bitter almond in establishment stage.	121
17- One-node cutting of bitter almond in establishment stage. ...	121

<u>Figure</u>	<u>Page</u>
18- Shoot-tip of Okenawa peach in establishment stage.	122
19- One-node cutting of Okenawa peach in establishment stage.	122
20- Shoot-tip of Marianna 2624 plum in establishment stage.	123
21- One-node cutting of Marianna 2624 plum in establishment stage.	123
22- Effect of explant preparation time on the performance of shoot-tip and one-node cuttings grown on modified MS medium with 1 mg BA, during the proliferation stage of three almond rootstocks.	127
23- Shoot-tip and one-node cutting of bitter almond during proliferation stage.	128
24- Shoot-tip of bitter almond during proliferation stage.	128
25- Shoot-tip of Okenawa peach during proliferation stage.	129
26- One-node cutting of Okenawa peach during proliferation stage.	129
27- Shoot-tip of Marianna 2624 plum during proliferation stage.	130
28- One-node cutting of Marianna 2624 plum during proliferation stage.	130
