INTRODUCTION	1
REVIEW OF LITERATURE	3
The causal organisms	3
Interaction between the pathogenic fungi ..	7
Physiological characters	9
Inoculum potential	14
Saprophytic behaviour	15
Effect of fungicides	17
MATERIALS AND METHODS	24
I. Isolation of the causal organisms	24
II. Pathogenicity tests	25
III. Physiological studies :	26
1- Detection of oxalic acid produced by <u>S.rolfsii</u>	26
2- Detection of oxalic acid concentra- tion after 15 days incubation	27
3- Effect of fungal filtrates on seeds and seedlings of different sunflower varieties	28
IV. Pot experiments :	29
1- Effect of different levels of inocula on disease severity	29
2- Disease reaction of different sun- flower varieties	29
V. Saprophytic behaviour :	30
1- Competitive saprophytic ability ...	30
2- Tolerance to antibiotics	31
VI. Effect of fungicides :	32
1- In vitro	32

2- Distribution of systemic fungicides in the plants	35
3- Effect of seed dressing fungicides on disease severity	35
EXPERIMENTAL RESULTS	37
I. Isolation of the causal organisms	37
II. Pathogenicity tests	38
III. Physiological studies	53
1- Detection of oxalic acid produced by <u>S.rolfsii</u>	53
2- Detection of oxalic acid concentra- tion after 15 days incubation	53
3- Effect of fungal filtrates on seeds and seedlings of different sunflower varieties	58
IV. Pot experiments :	64
1- Effect of different levels of inocula on disease severity	64
2- Disease reaction of different sun- flower varieties	69
V. Saprophytic behaviour :	74
1- Competitive saprophytic ability	74
2- Tolerance to antibiotics	75
VI. Effect of fungicides :	81
1- In vitro	81
2- Distribution of systemic fungicides in the plants	85
3- Effect of seed dressing fungicides on disease severity	93
DISCUSSION	96
