I. INTRODUCTION	1
II. REVIEW OF LITERATURE	3
1. Pathogenicity studies	3
1.1. Effect of fusarium and Nematode on the Incidence of wilt.	3
1.2. Effect of Grafted Rootstocks for Resistance of Fusarium and Nematodes	4
2. Effect of rootstocks on successful grafting	5
3. Anatomy of grafting union	5
4. Effect of grafting rootstocks on plant growth.....	7
5. Effect of grafting on chemical composition of plant foliage	8
5.1. Photosynthetic pigments.....	8
5.2. Macro- elements (N.P.K. Ca and Mg) content.....	8
5.3. Total phenols and indoles.....	9
5.4. Protein analysis in scion leaves.....	9
6. Effect of grafting on plant flowering and fruit – set.	10
7. Effect of grafting on yield and its components	10
8. The chemical constituent of fruits as affected by grafting cucumber on different rootstocks	12
8.1. Total carbohydrates fruit content	12
8.2. Total soluble solids in fruits.....	12
III. MATERIALS AND METHODS	13
IV. RESULTS AND DISCUSSION	22
1. Pathogenicity studies	22
2. Anatomical examinations	25
3. Successful grafting	42
4. Plant growth	44
5. Chemical composition of plant foliage	48
5.1. Photosynthetic pigments	48
5.2. Total phenols and indoles	49
5.3. Macro - elements constituents	51
5.4. Protein analysis	54

	Page
6. Effect of grafting on flowering and fruit setting	56
7. Yield and its components	59
8. Physical and chemical fruit characteristics.....	62
V. SUMMARY AND CONCLUSION	66
VI. REFERENCES	70
VII. ARABIC SUMMARY
