- Experimental Results	31
I - Isolation of the Causal Organism(S)	31
II- Pathogenecity tests	34
III- Antagonistic studies	43
A - In Vitro	
1 - On Plates	43
2 - On seed germination	45
3 - On filtration	46
B - In Vivo (Greenhouse experiments).....	48
1 - Seed treatments with antagonistic microor- ganisms.	48
a - Effect of seed treatments with differ- ent antagonistic microorganisms on in- fection with pathogenic fungi (sown in May).	48
a ₁ - Effect of seed treatments with differ- ent antagonistic microorganisms on in- fection with pathogenic fungi (sown in November).	50
b - Effect of infesting dry seeds with a crushed suspension of antagonists on root-rot severity and plant growth...	52
b ₁ - Effect of treating wetted seeds with crushed suspension (homogenized cult- ures of different antagonists on root rot severity and plant growth.	55

	Page
2 - On Soil Inoculation "soil treatments with the antagonistic microorganisms"	58
a - Effect of soil treatment with antagonists 7 days before sowing on infection with pathogenic fungi.	58
b - Effect of adding crushed suspension (homogenized cultures) of antagonistic microorganisms to soil on root-rot pathogens of broad bean and chickpea.	60
c - Effect of adding culture filtrates of antagonistic microorganisms to the soil on root-rot pathogens of broad bean and chickpea.	63
d - Effect of soil infestation with antagonists and pathogenic fungi at the same time on disease infection .	67
3 - Field Experiment :	
- Effect of seed treatment with antagonistic microorganisms compared with the fungicide Rizolex T. on survival plants and yield components of some leguminous crops under field conditions season 1986-1987.	67
- Discussion	75
- Summary	84
- References	90
- Arabic summary	1
