ACKNOWLEDEMENT.....	1
LIST OF TABLES.....	3
1. INTRODUCTION.....	3
2. REVIEW OF LITERATURE.....	3
2.1. Litter traits.....	7
2.1.1. Means.....	14
2.1.2. Variations.....	14
2.1.3. Non-genetic aspects.....	19
i. Year of kindling.....	25
ii. Month of kindling.....	31
iii. Parity.....	31
2.1.4. Genetic aspects.....	40
i. Crossbreeding and heterotic effect.....	45
ii. Buck-breed and direct additive effect.....	50
iii. Doe-breed and maternal additive effect.....	52
iv. Buck--breed and doe breed interaction.....	52
2.2. Doe reproductive traits.....	52
2.2.1. Means.....	58
2.2.2. Variations.....	58
2.2.3. Non-genetic aspects.....	62
i. Year of kindling.....	66
ii. Month of kindling.....	69
iii. Parity.....	69
2.2.4. Genetic aspects.....	69
i. Crossbreeding and heterotic effect.....	69
ii. Buck-breed and direct additive effect.....	70
iii. Doe-breed and maternal additive effect.....	71
iv. Buck-breed and doe-breed interaction.....	72
2.3. Growth traits.....	72
2.3.1. Means.....	76
2.3.2. Variations.....	80
2.3.3. Non-genetic aspects.....	80
i. Year of birth.....	83
ii. Month of birth.....	83
iii. Parity.....	93
iv. Sex.....	97
2.3.4. Genetic aspects.....	97
i. Crossbreeding and heterotic effect.....	101
ii. Sire-breed and direct additive effect.....	

	Page No.
iii. Doe-breed and maternal additive (genetic) effect	104
iv. Sire-breed and doe-breed interaction.....	107
2.4. Carcass traits	110
2.4.1. Means	111
2.4.2. Variations	111
2.4.3. Non-genetic aspects	111
i. Year of kindling.....	115
ii. Season of kindling.....	115
iii. Parity	115
iv. Sex	118
2.4.4. Genetic aspects	118
i. Crossbreeding and heterotic effect	118
ii. Sire-breed and direct additive (genetic) effect ..	119
iii. Dam-breed and maternal additive (genetic) effect	121
iv. Sire-breed and doe-breed interaction	125
3. MATERIALS AND METHODS	126
3.1. Location and Duration	126
3.2. Animals	126
3.3. Breeding Plan	126
3.4. Rabbitry and Housing	127
3.5. Management	127
3.6. Feeding and Feedstuffs	128
3.7. Carcass Test.....	128
3.8. Data	129
3.9. Statistical Analysis	130
4. RESULTS AND DISCUSSION	134
4.1. Litter traits	134
4.1.1. Actual Means	134
4.1.2. Variations	134
4.1.3. Non-genetic aspects	134
i. Year of kindling	139
ii. Month of kindling	140
iii. Parity.....	140
iv. Interactions	141
4.1.4. Genetic aspects	142
i. Mating group....	142
ii. Purebred differences	142
iii. Heterotic effect	142

	Page No.
iv. Maternal breed (additive) effect	145
v. Direct additive (breed) effect	146
4.2. Doe reproductive traits	147
4.2.1. Actual means	147
4.2.2. Variation	147
4.2.3. Non-genetic aspects	147
i. Year of kindling	150
ii. Month of kindling	150
iii. Parity	151
4.2.4. Genetic aspects	151
i. Mating group.....	151
ii. Purebred differences	151
iii. Heterotic effect	153
iv. Maternal additive (doe breed) effect	153
v. Direct additive (buck breed) effect	154
4.3. Progeny traits	154
4.3.1. Actual means	154
4.3.2. Variations	156
4.3.3. Non-genetic aspects	156
i. Year of kindling	165
ii. Month of birth.....	166
iii. Parity	167
iv. Sex	168
v. Interactions.....	168
4.3.4. Genetic aspects	168
i. Breed group	173
ii. Purebred differences	173
iii. Heterosis effect	174
iv. Maternal additive (breed) effect	175
v. Direct additive (sire breed) effect	177
4.4. Carcass traits	177
4.4.1. Actual means	177
4.4.2. Variations	179
4.4.3. Non-genetic aspects	179
i. Year of birth	179
ii. Season of birth.....	184
iii. Parity	184
iv. Interactions	185
4.4.4. Genetic aspects.....	185
i. Breed group	185
ii. Purebred differences	188
iii. Heterotic effect	188

	Page No
iv. Maternal additive (breed) effect	188
v. Direct additive (sire breed) effect	189
5. SUMMARY	190
5.1. Litter traits.....	190
5.2. Doe reproductive traits	191
5.3. Progeny traits	191
5.4. Carcass traits	192
6. REFERENCE	194
ARABIC SUMMRY

LIST OF TABLES

	Page No.
Table 1: Means of litter size traits for Californian and Gabali rabbit as cited from the literature.	4
Table 2: Means of litter weight traits (gm) for Californian and Gabali rabbits as cited from the literature.....	6
Table 3: Means of mean bunny weight per litter (gm) at birth, 21 days and weaning for Californian rabbits as cited from the literature.	8
Table 4: Means of mortality per litter from birth up to weaning in Californian rabbits as cited from the literature.	9
Table 5: Coefficients of variation of some litter traits in different rabbits breed groups as cited from the literature.	10
Table 6: Components for models used in analysing different litter traits, as cited from the literature.	15
Table 7: Averages of litter traits at different months of kindling as cited from the Egyptian studies	20
Table 8: Means of litter traits according to parity as cited from the literature.	26
Table 9: Estimates of heterosis percentages for litter size at birth and at weaning as cited from the Egyptian literature	32
Table 10: Estimates of heterosis percentages for litter weight at birth, litter weight at weaning and mean bunny weight per litter as cited from the Egyptian literature.	34
Table 11: Estimates of percentages heterosis for litter traits as cited from the non- Egyptian literature	37
Table 12: Tests of significance for the effects of buck-breed (BB), doe breed (DB) and BB x DB interaction on litter traits as cited from the literature.	41

	Page NO.
Table 13: Means of some litter traits according to buck-breed and doe-breed as cited from the French literature	42
Table 14: Least squares means of pre-weaning litter traits according to buck-breed and doe-breed as well as buck-breed and doe-breed contrasts.....	43
Table 15: Tests of significance of maternal additive (breed) effect on litter traits as cited from the literature	49
Table 16: Means of doe reproductive traits of different breed groups of rabbits as cited from the literature.	53
Table 17: Coefficients of variation (CV%) of reproductive traits in different breed groups of rabbits as cited from the Egyptian literature.....	57
Table 18: Components of models used in analyzing different doe reproductive traits as cited from the literature.	59
Table 19: Means of doe reproductive traits according to month of kindling as cited from Egyptian literature.	63
Table 20: Means of doe reproductive traits according to parity as cited from the literature	67
Table 21: Means of weaning and post-weaning body weight (BW) for Californian and Gabali rabbits at different ages as cited from the literature	73
Table 22: Means of post-weaning daily gain in weight (gm) for Californian and Gabali rabbits at different ages as cited from the literature	74
Table 23: Means of post-weaning livability percentage (weeks) in Californian rabbits as cited from the literature	75
Table 24: Coefficients of variation (Cv%) of growth traits (body weight, daily gain and post-weaning livability) as cited from the literature	77

	Page No.
Table 25: Model components and some non-genetic factors affecting growth traits as cited in the Egyptian studies.	81
Table 26: Means of weaning body weight as well as post-we body weight, daily gain and livability according to mon birth as cited the from the Egyptian literature.....	84
Table 27: Means of weaning body weight in addition to body wei gm, , daily gain, gm and post-weaning livability accord parity as cited the from the literature.....	89
Table 28: Means of growth traits (body weight , daily gain and p weaning livability at different age stages according to s cited from the literature	94
Table 29: Estimates of heterosis percent of body weight at different age stages as cited from the Egyptian literature.....	99
Table 30: Estimates of heterosis percent of post-weaning daily gain at different age stages as cited from the Egyptian literature.....	100
Table 31: Means of body weight at different age stages according to breed of sire as cited from the literature .	102
Table 32: Means of post-weaning daily gain in rabbits at different age stages according to breed of sire as cited from the literature.....	103
Table 33: Means (gm) of body weight and post-weaning daily gain (gm) at different age stages according to breed of dam as cited from the literature	106
Table 34: Tests of significance of maternal-breed effects on body weight and post-weaning daily gain at different age stages as cited from the Egyptian literature	108
Table 35: Means of some carcass traits in different breeds of rabbits as cited from the literature.....	112

	Page No.
Table 36: Estimates of coefficient of variation (CV %) for some carcass traits in rabbits as cited from the literature.....	113
Table 37: Components of models used in analysing carcass traits as cited from the literature	114
Table 38: Means of some carcass traits at 12 weeks of age in New Zealand White, Baladi Red and their crosses according to season of birth as cited from the Egyptian literature.....	116
Table 39: Means of some carcass traits at 12 weeks of age according to parity as cited from the Egyptian literature.....	117
Table 40: Estimates of heterosis percent of some carcass traits as cited from the literature	120
Table 41: Means of some carcass traits according to sire breed and dam breed as cited from the literature	122
Table 42: Means of some carcass traits according to sire-breed, dam-breed groups and selected contrasts as cited from the American literature	124
Table 43: Genetic model of the estimation of crossbreeding genetic effects.....	132
Table 44: Actual means, standard deviations (SD) and coefficients of variation for (CV%) for litter and doe reproductive traits in Californian, Gabali and their reciprocal crosses..	135
Table 45: F-ratios of least squares analysis of variance of factors affecting litter traits	136
Table 46: Least squares means and standard errors of factors affecting litter size traits.....	137

	Page No.
Table 47: Least squares means and standard errors of factors affecting litter weight, mean bunny weight per litter and pre-weaning litter mortality.....	138
Table 48: Estimates of mating group means (\pm SE), purebred differences, heterosis, maternal additive effect (G^m) and direct additive effect (G^d) of litter size traits	143
Table 49: Estimates of mating type, means (\pm SE), purebred differences, heterosis, maternal additive effect (G^m) and direct additive effect (G^d) of litter weight, mean bunny weight per litter and pre-weaning litter mortality.....	144
Table 50: F- ratios of least squares analysis of variance of factors affecting doe reproductive traits	148
Table 51: Least squares means and standard error of factors affecting doe reproductive traits.....	149
Table 52: Estimates of mating group, means (\pm SE), purebred differences, heterosis, maternal additive effect (G^m) and direct additive effect (G^d) of doe reproductive traits	152
Table 53: Actual means, standard deviations, coefficients of variation (CV%) of body weight, post-weaning daily gain and livability traits.....	155
Table 54: F-ratios of least squares analysis of variance of factors affecting weaning and post-weaning body weight up to 16 weeks of age	157
Table 55: F-ratios of least squares analysis of variance of factors affecting post-weaning daily gain in weight up to 16 weeks of age	159
Table 56: F-ratios of least squares analysis of variance of factors affecting post-weaning livability.....	160
Table 57: Least squares means of factors affecting weaning and post-weaning body weight at different ages.....	161

	Page No.
Table 58: Least squares means of factors affecting post-weaning daily gain up to different ages till 16 weeks of age.....	163
Table 59: Least squares means of factors affecting post-weaning livability up to different ages till 16 weeks of age.....	164
Table 60: Estimates of breed groups, means (\pm SE), purebred differences, heterosis, maternal additive effect (G^m) and direct additive effect (G^d) of body weight at different ages.	169
Table 61: Estimates of breed groups, means (\pm SE), purebred differences, heterosis, maternal additive effect (G^m) and direct additive effect (G^d) of post-weaning daily gain in weight	171
Table 62: Estimates of mating type, means (\pm SE), purebred differences, heterosis, maternal additive effect (G^m) and direct additive effect (G^d) of post-weaning livability	172
Table 63: Actual means, standard deviations (SD) and coefficient of variation (CV%) for carcass traits of Gabali, Californian rabbits and their crosses at 12 and 16 weeks of age.....	178
Table 64: F-ratios of least squares analysis of variance of factors affecting carcass traits at 12 weeks of age.....	180
Table 65: F-ratios of least squares analysis of variance of factors affecting carcass traits at 16 weeks of age.....	181
Table 66: Least squares mean and standard errors of factors affecting carcass traits at 12 weeks of age.....	182
Table 67: Least squares mean and standard errors of factors affecting carcass traits at 16 weeks of age.....	183

	Page No.
Table 68: Estimates of breed group means, purebred differences heterosis,maternal additive effect and direct additive effect of carcass traits at 12 weeks	186
Table 69: Estimates of breed group means, purebred differences heterosis,maternal additive effect and direct additive effect of carcass traits at 16 weeks	187

LIST OF ABBREVIATIONS

Cal	Californian
CV	Coefficient of variation
D%	Dressing percentage
DG	Daily Gain
DO	Days open
FW	Fast weight
Gab	Gabali
GL	Gestation length
GW	Giblets weight
HCW	Hot carcass weight
HLW	Hind legs weight
HW	Head weight
KI	Kindling interval
LS21	Litter size at 21 days
LSB	Litter size at birth
LSW	Litter size at weaning
LW	Lion weight
LW21	Litter weight at 21 days
LWB	Litter weight at birth
LWW	Litter weight at weaning
MBW21	Mean bunny weight at 21 days
MBWB	Mean bunny weight at birth
MBWW	Mean bunny weight at weaning
NSC	Number services of conception
PM	Pre-weaning litter mortality
PW	Pelt weight
TCW	Thoracic cut weight
VW	Viscera weight
