REVIEW OF LITERATURE	1
MATERIALS AND METHODS	24
EXPERIMENTAL RESULTS	43
1. Isolation and Identification of the Causal Organisms	43
2. Pathogenicity Tests	43
2.1. Rating of disease incidence on cv. Pyri at different growth stages	45
2.1 1-Rapid growth stage	45
2.1 2-Preripening stage	45
2.1 3-Ripening stage	47
2.1 4-Mature ripening stage	47
2.2. Rating of disease incidence on cv. Taimour at different growth stages	48
2.2 1-Rapid growth stage	48
2.2 2-Preripening stage	50
2.2 3-Ripening stage	50
2.2 4-Mature ripening stage	50
3. Symptoms	52
4. Factors affecting disease severity	52
4.1. 1- Effect of Wounding on disease incidence of mango cv. Pyri	52
4.1. 2- Effect of Wounding on disease incidence of mango cv. Taimour	56
4.2. Effect of Inoculum density	58
5. Host range	60

6. Physiological Studies	62
7. Chemical changes due to infection at different growth stages of mango fruits	77
7.1. 1 Changes in Titrable acidity, pH, TSS of cv. Pyri	77
7.1. 2 Changes in Titrable acidity, pH, TSS of cv. Taimour	79
7.2. 1.1 Changes in sugars, phenols and total amino acids of cv. Pyri fruits of the rapid growth stage	81
7.2. 1.2 Changes in sugars, phenols and total amino acids of cv. Pyri fruits of pre-ripening stage	83
7.2. 1.3 Changes in sugars, phenols and total amino acids of, cv. Pyri fruits of ripening stage	86
7.2. 1.4 Changes in sugars, phenols and total amino acids of, cv. Pyri of mature ripening stage	86
7.2. 2.1 Changes in sugars, phenols and total amino acids of cv. Taimour fruits of rapid growth stage	89
7.2. 2.2 Changes in sugars, phenols and total amino acids of, cv. Taimour fruits of pre-ripening stage	89
7.2. 2.3 Changes in sugars, phenols and total amino acids of cv. Taimour fruits of ripening stage	93
7.2. 2.4 Changes in sugars, phenols and total amino acids of cv. Taimour fruits of mature ripening stage	93
8. Toxogenic Studies	96
9. <i>In vitro</i> and <i>in vivo</i> changes in enzymes produced by pathogenic fungi	96
<u>In vitro</u>	
9.1. 1 Cellulase enzyme produced by the pathogenic isolates at pH 6.8 or 4.5	98
9.1. 2 Xylanase enzyme produced by the pathogenic isolates at pH 6.8 or 4.5	98
9.1. 3 PG enzyme produced by the pathogenic isolates at pH 6.8 or 4.5	102
9.1. 4 Relationship between the time and secretion of Cellulase, Xylanase and PG enzymes in liquid medium contained Xylan as a carbon source of <i>B. theobromae</i> (MB) at pH 4.5	107
9.1. 5 Relationship between the time and secretion of Cellulase, Xylanase and PG enzymes in liquid medium contained CMC as a carbon source of <i>B. theobromae</i> (MB) at pH 4.5	107

<i>In vivo</i>	
9.2. 1 Production of degraded enzymes Cellulase, Xylanase and PG on infected mango fruits 5 days after inoculation by <i>B. theobromae</i> isolates and <i>F. moniliforme</i> .	107
9.2. 2 Relationship between the infection periods and secretion of degraded enzymes Cellulase, Xylanase and PG in infected mango fruits with <i>B. theobromae</i> (MB)	112
10. Protein Assay	112
10.1 1 Total protein in filtrates of <i>B. theobromae</i> and <i>F. moniliforme</i> isolates growing in liquid media containing different carbon sources after inoculation at pH 6.8 and 4.5	112
10.1.2 Relationship between the incubation periods and producing of protein in liquid medium contained Xylan as a carbon source for <i>B. theobromae</i> (MB) at pH 4.5	119
10.1.3 Relationship between the incubation periods and producing of protein in liquid medium contained CMC as a carbon source for <i>B. theobromae</i> (MB) at pH 4.5	121
10.2 1 The quantity of protein in one gram fresh weight of healthy and infected mango fruits with pathogenic isolates 5 days post inoculation	121
11. Chemical Control <i>B. theobromae</i> Pat. and <i>F. moniliforme</i>	121
11.1 1 Effect of fungicides on linear growth (mm) of pathogenic isolates	123
11.1.2 Effect of fungicides with different concentrations on pycnidial formation and sporulation of <i>B. theobromae</i> Pat. and <i>F. moniliforme</i>	123
11.2 1 Effect of two fungicides on mango fruit rot in orchards	126
11.2.2 Effect of fungicidal treatment of stored fruits	126
