

CONTENTS

	Page
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	3
2.1. Distribution and succession of blue-green algae in rice fields.....	5
2.2. Mechanism of nitrogen fixation	7
2.3. Nitrogen fixation by blue-green algae	13
2.4. Atmospheric N molecule	14
2.5. Nitrogenase enzyme system.....	15
2.6. Application of blue-green algae as biofertilizer .	16
2.7. Beneficial effects of blue-green algae.....	20
2.7.1. Increasing nitrogen in soil	20
2.7.2. Growth promoting effect	21
2.8. Nitrogen fixing bacteria, <u>Azospirillum</u>	21
1. Nutrient uptake	24
2. Nitrogen fixation	24
3. Plant growth substances.....	25
3. MATERIALS AND METHODS	26
3.1. Soil used	26
3.2. Rice seeds	26
3.3. The fertilizer	26
3.4. Algal and bacterial strains	26
3.5. Media used	28
3.6. Algal inoculum for field application	28
3.7. The use of fertilizers	30
3.8. Parameters determined	31
3.9. Experimental design	31
3.10. Chemical determinations	32
1. Total nitrogen	32
2. Organic carbon	32
3. pH value	32
4. Total soluble carbohydrates	32
5. Amino acids	32

	<u>Page</u>
4. RESULTS AND DISCUSSIONS	33
4.1. Effect of algal and/or bacterial inoculation on rice grain yield	33
4.2. Effect of algal and/or bacterial inoculation on grain weight	37
4.3. Effect of algal and/or bacterial inoculation on dry weight of shoots.....	40
4.4. Effect of algal and/or bacterial inoculation on total nitrogen content of rice grains	43
4.5. Effect of algal and/or bacterial inoculation on the total carbohydrates content of rice grains	46
4.6. Effect of algal and/or bacterial inoculation on the percentage of amino acids of rice grains	49
5. SUMMARY	52
6. REFERENCES	56
