1. INTRODUCTION.....	1
2. REVIEW OF LITERATURE	2
2.1. Classification of the synthetic soil conditioners.....	2
2.2. Super absorbent organic polymers (hydrogels) as synthetic conditioners for sandy soils.....	3
2.2.1. The nature of hydrogels	4
2.3. Cellulose xanthate (CX) and carboxymethyl cellulose (CMC) as soil conditioners	5
2.3.1. Cellulose xanthate (CX)	5
2.3.2. Carboxymethyl cellulose (CMC)	6
2.4. The effect of synthetic organic conditioners on soil physical properties	7
2.4.1. Soil bulk density and total porosity	7
2.4.2. Soil aggregates	8
2.4.3. Soil water retention	11
2.4.4. Pore size distribution	14
2.4.5. Hydraulic conductivity	15
2.5. Germination and plant growth as affected by synthetic organic polymers	16
2.5.1. Germination	16
2.5.2. Plant growth and yield	18
2.6. Effect of synthetic organic polymers on consumptive use and water use efficiency	21
2.6.1. Consumptive use	21
2.6.2. Water use efficiency	22
2.7. Effect of synthetic organic polymers on nitrogen, phosphorus and potassium uptake by plants	23

3. MATERIALS AND METHODS.....	25
3.1. The Soil	25
3.2. Preparation of carboxymethyl cellulose	27
3.3. Preparation of cellulose xanthate from cellulosic fibers	27
3.4. Soil physical properties	29
3.4.1. Mechanical analysis	29
3.4.2. Bulk density and total porosity	29
3.4.3. Water stable structure units	30
3.4.4. Soil moisture characteristics	30
3.4.5. Pore size distribution	30
3.4.6. Hydraulic conductivity	31
3.4.7. Intrinsic permeability	31
3.4.8. Mean diameter of soil pores	31
3.5. Soil chemical properties	31
3.5.1. Soluble cations and anions	31
3.5.2. Calcium carbonate percentage	32
3.5.3. Soil pH	32
3.5.4. Total soluble salts	32
3.5.5. Organic matter	32
3.6. Plant growth, consumptive use, water use efficiency and NPK uptake	32
3.6.1. Germination percentage	33
3.6.2. Dry yield	33
3.6.3. Consumptive use (Evapotranspiration)	33
3.6.4. Water use efficiency	34
3.6.5. Evapotranspiration ratio	34
3.6.6. Plant analysis	34

3.7. Experimental design and statistical analysis	35
4. RESULTS AND DISCUSSION	36
4.1. Effect of CMC and CX on some soil physical properties	
4.1.1. Water stable aggregates	36
4.1.2. Aggregate mean weight diameter (MWD)	41
4.1.3. Bulk density, void ratio and total porosity	46
4.1.4. Pore size distribution	51
4.1.5. Soil water retention	58
4.1.6. Hydraulic conductivity and hydraulic resistivity...	64
4.1.7. Soil intrinsic permeability and mean pore diameter.	67
4.2. Effect of CMC and CX on germination and dry weight of maize	72
4.2.1. Germination	72
4.2.2. Shoot dry weight	78
4.3. Effect of CMC and CX on consumptive use, water use efficiency and evapotranspiration ratio	84
4.3.1. Consumptive use	84
4.3.2. Water use efficiency	87
4.3.3. Evapotranspiration ratio	92
4.4. Nitrogen, phosphorus and potassium content of maize plants as affected by CMC and CX polymers.	94
4.5. Effect of CMC and CX on nitrogen, phosphorus and potassium uptake by maize plants	99
4.5.1. Nitrogen uptake	99
4.5.2. Phosphorus uptake	103
4.5.3. Potassium uptake	104
5. SUMMARY	106
6. REFERENCES	114
