

CONTENTS

	<u>Page</u>
1- INTRODUCTION	1
2- REVIEW OF LITERATURE	3
2-1- Soil physical properties as influenced by flooding and waterlogging	3
2-2- Soil chemical properties influenced by flooding and waterlogging	6
2-3- Availability of soil P as influenced by flooding and waterlogging	17
2-4- Cation exchange capacity and exchangeable cations of soil as influenced by flooding and waterlogging	22
2-5- The effect of fertilizers on soil fertility of the fish farm	26
3- MATERIALS AND METHODS	31
3-1- Areas of investigation	31
3-2- Description of the farm	33
3-3- Soil sampling	36
3-4- Water sampling	39
3-5- Addition of fertilizers to ponds	39
3-6- Methods of analysis	43
4- RESULTS AND DISCUSSIONS	47
4-1- The effect of fish farming conditions on particle size distribution of the soil.....	47
4-2- The effect of fish farming conditions on soil pH.....	52
4-3- The effect of fish farming conditions on soil salinity.....	55
4-4- The effect of fish farming conditions on soluble cations and anions	60
4-5- The effect of fish farming conditions on cation exchange capacity and soil organic matter.....	88
4-6- The effect of fish farming conditions on soil exchangeable cations	95
