INTRODUCTION	1
REVIEW OF LITERATURE	5
MATERIALS AND METHODS	29
EXPERIMENTAL RESULTS	60
I- Distribution of barley spot blotch disease in Egypt from 1979-1981	60
II- Isolation and identification of the causal organism	60
III- Pathogenicity test	63
IV- Host range	63
V- Viability of <u>Helminthosporium sativum</u>	66
VI- Enzymes studies :.....	68
A- Production of pectolytic and cellulolytic enzymes by three isolates of <u>H.</u> <u>sativum</u> and effect of some fungicides on their activity in the fungal filtrates...	68
B- Determination of oxidative enzymes acti- vity	73
1. Determination of oxidative enzymes activity in fungal filtrates and matrix of two isolates of <u>H. sativum</u> .	73
2. Determination of oxidative enzymes activity in the extracts of barley plants.....	79
a- Polyphenol oxidase activity	79
b- Peroxidase activity	80
c- Catalase activity.....	80
d- Ascorbic acid oxidase activity...	84

	Page
VII- Biochemical changes associated with resistance to spot blotch disease of barley	84
A- Determination of phenolic compounds	84
1. Total phenols	85
2. Free phenols	85
3. Conjugated phenols	89
4. Ortho-dihydroxy phenols	89
B- Determination of sugars	90
1. Total sugars	90
2. Reducing sugars	94
3. Non-reducing sugars	94
4. Individual sugars	94
C- Free amino acids:	96
1. Total free amino acids	97
2. Individual amino acids	99
- Qualitative and quantitative analysis	99
3. Effect of amino acids on <u>H. sativum</u> growth <u>in vitro</u>	107
VIII- Toxicological studies:	
1. Effect of different concentrations of cruds culture filtrate of two isolates of <u>H. sativum</u> on the percentage of seed germination, coleoptile elongation and length of roots at different periods	108
2. Purification of culture toxins of two isolates of <u>H. sativum</u> differing in their pathogenicity.....	111
3. Effect of different concentrations of each of the purified toxins on the percentage of seed germination, coleoptile elongation and length of roots	113
