
CONTENTS

	Page
1. Introduction	1
2. Review of literature	2
2.1. Evaluation of irrigation water quality	2
2.1.1. Salinity hazard	3
2.1.2. Sodicity hazard	6
a) Sodium adsorption ratio (SAR)	6
b) Residual sodium carbonate (RSC)	9
2.1.3. Boron hazard	10
2.1.4. Soil conditions affecting suitability of irrigation waters.	11
2.2. Effect of saline irrigation water on some soil Chemical properties.	12
2.2.1. Soil salinity	13
2.2.2. Exchangeable cations	16
2.3. Effect of saline irrigation water on growth and chemical composition of plant	19
2.3.1. Effect of Salinity	20
2.3.2. Specific ions effect	25
a) Specific cations effect	25
b) Specific Anions effect	27

	Page
3. Materials and methods	30
3.1. Soil Samples	30
3.2. Saline irrigation water used	30
3.3. Experimental	31
3.4. Methods of detremination	32
4. Results and discussion	35
4.1. Soil salinity	35
4.2. ionic composition of soils extracts	40
a) Soluble sodium	40
b) Soluble potassium	42
c) Soluble calcium	45
d) Soluble magnesium	47
e) Bicarbonates and carbonates ions	49
f) Soluble chlorides	53
i) Sulphate ions	54
4.3. Exchangeable cations	55
a) Exchangeable sodium	55
b) Exchangeable Calcium	57
c) Exchangeable Magnesium	59
d) Exchangeable potassium	60
4.4. Dry matter yield	61
4.4.1. Chemical composition of sorghum plants grown on the clay soil	63

	Page
4.4.2. Chemical composition of sorghum plants grown on sandy soil	67
4.4.3. Chemical composition of sorghum plants grown on calcareous soil	69
5. Summery	73
6. References	81
