1. Introduction	1
2. Review of literature	2
2.1. Factors controlling some nutrients availability in soils.	2
2.1.1. Effect of CaCO_3	2
2.1.1.1. Phosphorus availability	3
2.1.1.2. Zinc availability	6
2.1.1.3. Iron availability	8
2.1.1.4. Manganese availability	10
2.1.1.5. Copper availability	11
2.1.2. Effect of Zn interaction	12
2.1.2.1. Zn-P interaction	12
2.1.2.2. Zn-Fe interaction	13
2.1.2.3. Zn-Mn interaction	14
2.1.2.4. Zn-Cu interaction	15
2.2. Interaction of Zn in plant	15
2.2.1. Zn-P Interaction	15
2.2.2. Zn-Fe Interaction	18
2.2.3. Zn-Mn Interaction	18
2.2.4. Zn-Cu Interaction	19
2.3. Mobility of some nutritive element in soil	19
2.3.1. Mobility of P	19
2.3.2. Mobility of Zn	20
3. Materials and Methods	22
3.1. Pot experiments	22

	Page
3.2. The column experiment	24
2.3. Methods of analysis	25
3.3.1. Soil analyses	25
3.3.2. Plant analysis	27
4. Results and Discussion	28
4.1. Factors controlling availability of some nutritive elements in soils	28
4.1.1. Effect of CaCO_3	28
4.1.1.1. Phosphorus availability	28
4.1.1.2. Zinc, iron, manganese and copper availability	32
4.1.2. Effect of zinc	44
4.1.2.1. Phosphorus availability	44
4.1.2.2. Zinc, iron, manganese and copper availability	44
4.2. Effect CaCO_3 applied solely or in combination with Zn on dry matter yield and nutrient content of barley plant	47
4.2.1. Dry matter yield	47
4.2.2. Content and uptake of some nutritive element by plant	52
4.2.2.1. Phosphorus	52
4.2.2.2. The micronutrients	59
4.3. Effect of CaCO_3 applied solely or in combination with Zn on mobility of P and Zn through the different layers of the investigated soils	87
4.3.1. Phosphorus mobility	87
4.3.2. Zinc mobility	93
5. Summary	99
6. References	103
7. Summary in Arabic
