

CONTENTS

	Page
1. Introduction	1
2. Review of literature	3
2.1. Definition of water harvesting	3
2.2. Classification of water harvesting methods and techniques	5
2.3. Factor affecting selection of methods of water harvesting	7
2.3.1. Slope	7
2.3.2. Soil.....	8
2.3.2.1. Soil crust	8
2.3.2.2. Soil- hydrological	9
2.3.3. Crop water requirement.....	10
2.3.4. The ratio of the catchment area to cultivated area	10
2.3.5. Costs.....	12
2.4. Types of water harvesting techniques	13
2.4.1. Micro catchment.....	13
2.4.1.1. Ridges (Negarims).....	13
2.4.1.2. Contour bunds	15
2.4.1.3. Semi- circular bunds.....	15
2.4.1.4. Contour ridges	16
2.4.1.5. Soil pitting	17
2.4.2. Macro catchment	18
2.4.2.1. Embankments (stone and earth bunds).....	18

	Page
2.4.2.1.1. Permeable rock dams	18
2.4.2.1.2. Trapezoidal bunds..	19
2.4.2.2. Water spreading bunds	20
2.4.2.3. Contour stone bunds.....	20
2.4.2.4. Cisterns	21
2.5. The methods which used to raise the efficiency of water harvesting	23
2.5.1. Soil-surface treatments	24
2.5.1.1. Stones cleaning	24
2.5.1.2. Soil surface-smoothing and soil surface compacting	24
2.5.1.3. Covering soil-surface with plastic (and similar) sheets ...	24
2.5.2. Chemical treatments	25
2.5.2.1. The paraffin wax.....	26
2.5.2.2. Asphalt.....	26
2.5.2.3. Sodium salts	27
2.5.2.4. Wheat straw.....	28
2.6. Water harvesting for plant production.....	28
2.7. Rainfall – run off relationships.....	32
2.7.1. Rainfall data analysis.....	39
3. Material and Methods	42
3.1. Design of the field Experiment	42
3.1.1. Assessment of water harvesting setups used by farmers in the region	44

	Page
3.1.2. Experiment setup and treatments	47
3.1.3. Soil sampling.....	48
3.2. Field measurements	48
3.2.1. Slope of the land	48
3.2.2. Infiltration rate.....	48
3.2.3. Rainfall amounts.....	52
3.2.4. Runoff volume.....	52
3.2.5. Soil moisture.....	52
3.3. Calculations for efficiency parameters	53
3.3.1. Runoff efficiency	53
3.3.2. Efficiency of runoff storage	53
3.3.3. Overall Efficiency of the micro-catchment area of the water-harvesting system	54
3.4. Methods of analysis	55
3.4.1. Soil analysis	55
3.4.2. Plant analysis	56
4. Results and Discussion	57
4.1. Assessment of meteorological data of the region	57
4.1. Meteorological data	57
4.1.1. Temperature	57
4.1.2. Humidity	57
4.1.3. Wind, sunshine and solar radiation	59
4.1.4. Rain	59
4.1.4.1. Assessment of rain data	60
4.1.5. Evapotranspiration	63

	Page
4.2. Assessment of water-harvesting efficiency	63
4.2.1. Efficiency of El-Qasr water harvesting systems (stones & earth embankment) ..	64
4.2.2. Non embankment water harvesting	64
4.2.3. Earth embankment	68
4.2.4. Stone embankment	68
4.2.2. Efficiency of the experimental water harvest systems (comparison of different catchment ratios).....	71
4.2.2.1. Efficiency of runoff “ER”	71
4.2.2.2. Efficiency of runoff storage “ES”	75
4.2.2.3. Overall efficiency of the water- catchment systems “EO”	80
4.2.2.4. Conclusive assessment on the catchment ratios.....	84
4.3. Assessment of response of crop performance and soil fertility to the experimental water catchment ratios	84
4.3.1. Plant height.....	85
4.3.2. Yield of wheat grains.....	90
4.3.3. Yield of wheat straw.....	91
4.3.4. Concentration of micronutrients in straw of wheat.....	92
4.3.4.1. Fe concentration in straw of wheat.....	93

	Page
4.3.4.2. Mn concentration in straw wheat	97
4.3.4.3. Zn concentrations in straw wheat	98
4.3.5. Available micronutrients Fe, Mn and Zn in soil after crop harvest.....	99
4.3.5.1. Available Fe.....	99
4.3.5.2. Available Mn.....	103
4.3.5.3. Available Zn.....	104
5. Summary	106
6. References	110
7. Appendices	128
8. Arabic summary	-

LIST OF TABLES

Table No.	Title	Page
(1)	Soil properties of the study in El-Qasr area.	49
(2)	Meteorological data for the study area from October 2002 to October 2004	58
(3)	Daily and monthly distribution of rain fall during the study period.	61
(4)	Volumes of runoff water (RV) and water stored in root zone (SV); and overall efficiency (EO) measured in some embankment systems used by farmers at Al-Qasr area during season 1.	65
(5)	Volumes of runoff water (RV) and water stored in root zone (SV); and overall efficiency (EO) measured in some embankment systems used by farmers at Al-Qasr area during season 2.	66
(6)	Means of runoff efficiency (ER)% after rain storms occurring during study periods under various catchment areas and soil-surface treatments.	73
(7)	Means of runoff storage efficiency (ES)% after rain storms occurring during study periods under various catchment areas and soil-surface treatments.	76
(8)	Means of overall efficiency (EO)% after rain storms occurring during study periods under various catchment areas and soil-surface treatments.	81

Table No.	Title	Page
(9)	Plant height (cm), grains weight and straw weight (kg/fed) of wheat plants in the first season 2002/2003 under different catchment areas and different soil-surface treatments.	86
(10)	Plant height (cm), grains weight and straw weight (kg/fed) of wheat plants at the second season 2003/2004 under different catchment areas and different soil-surface treatments.	87
(11)	Concentrations (μgg^{-1}) of micronutrients (Fe, Mn and Zn) in wheat plants in the first season 2002/2003 under various catchment areas and soil-surface treatments.	94
(12)	Concentrations (μgg^{-1}) of micronutrients (Fe, Mn and Zn) in wheat plants in the second season 2003/2004 under various catchment areas and soil- surface treatments.	95
(13)	Available (DTPA extractable) micronutrients (Fe, Mn and Zn) in soil under the first season 2002/2003 under different catchment areas and different soil-surface treatments.	100
(14)	Available (DTPA extractable) of micronutrients (Fe, Mn and Zn) in soil in the second season 2003/2004 under different catchment areas and different soil-surface treatments.	101

LIST OF FIGURES

Figure No.	Title	Page
(15)	Location of the study area	43
(16)	Schematic diagram of the recording automatic weather station mounted at the study area	45
(17)	Stone embankments used by farmers was chosen in El-Qasr area	46
(18)	A skematic digram of the shape of the overall area of the experimental plot, showing the shape of each of the 3 cropped area: catchment area (CR/CT) ratios 1/ 2 (R_1); 1/ 4 (R_2) and 1/ 6 (R_3).	50
(19)	The distribution of rainfall during the two winter seasons 2002/2003 and 2003/2004.	62
(20)	Efficiency evaluation of water harvesting systems at Al-Qasr area after rain stroms occurring in the seasons of 2002/2003 and 2003/2004.	67
(21)	Means of Runoff efficiency after rain storm occurring in the first and second season 2002/2003 - 2003/2004 under various catchment areas and surface treatments.	74
(22)	Means of Runoff storage after rain storm occurring in the first and second season 2002/2003 - 2003/2004 under various catchment areas and surface treatments.	77

Figure No.	Title	Page
(23)	Means of overall efficiency after rain storm occurring in the first and second season 2002/2003 - 2003/2004 under various catchment areas and surface treatments	82
(24)	Plant height (cm), grains weight and straw weight (kg/fed) of wheat plants in the first and second seasons 2002/2003 – 2003/2004 under different catchment areas and different amendment.	88
(25)	Concentrations (mg kg^{-1}) of micro nutrients (Fe, Mn and Zn) in wheat plants in the first and second seasons 2002/2003 – 2003/2004 under various catchment areas and soils surface treatment.	96
(26)	Concentration (mg kg^{-1}) of soil available (DTPA extractable) of micronutrients (Fe, Mn and Zn) on soil in the first and second seasons 2002/2003 – 2003/2004 under various catchment areas and surface soil treatments.	102
