1. INTRODUCTION	1
2. REVIEW OF LITURATURE	3
2.1. Techniques of immobilization	4
2.2. Effect of immobilization on the kinetics parameters and activity of lactase enzyme	18
2.3. Industrial application of immobilized β -galactosidase enzyme	24
3. MATERIALS AND METHODS	29
3.1. Materials	29
3.1.1. Source of materials	29
3.1.2. Microorganisms	29
3.1.2.1. Media used	29
3.1.2.2. Propagation	30
3.2. Methods	30
3.2.1. Microbiological techniques	30
3.2.2. Enzyme assays	31
3.2.3. Protein determination	31
3.2.4. Methods of immobilization	31
3.2.4.1. Immobilization of β -galactosidase by entrapment	32
3.2.4.2. Immobilization of β -galactosidase on sand	32
3.2.4.3. Immobilization of β -galactosidase on chitin	33
3.2.4.4. Adsorption of enzymes on concanavalin A-sepharose	34
3.2.5. Kinetic parameters of native and immobilized β -galactosidase preparations enzyme	35
3.2.5.1. Effect of pH on the reaction activity of free and immobilized forms	35
3.2.5.2. Effect of temperature on the reaction activity of free and immobilized forms	35
3.2.5.3. Effect of substrate concentration on the reaction velocity of free and immobilized β -galactosidase enzyme	36
3.2.5.4. Effect of enzyme concentration on the reaction activity of free and immobilized forms	36
3.2.6. Stability of free and immobilized enzyme on different supports	36
3.2.7. Effect of time on the hydrolysis of lactose	37
3.2.8. Reuse of immobilized β -galactosidase enzyme	37

4. RESULTS AND DISCUSSION	Page 39
4.1. Suitable conditions for the production and evaluation of the β -galactosidase from <i>Kluyveromyces marxianus</i>	39
4.1.1. Effect of incubation period on the production of β -galactosidase enzyme	39
4.1.2. Effect of different incubation temperatures on the production of β -galactosidase enzyme	41
4.1.3. Evaluation and characteristics of the produced β -galactosidase enzyme	42
4.1.3.1. Effect of temperature on the reaction activity of the produced β -galactosidase	44
4.1.3.2. Effect of pH on the reaction activity of crude β -galactosidase enzyme	46
4.1.3.3. Effect of enzyme amounts on the reaction activity of the produced β -galactosidase enzyme	46
4.1.3.4. Effect of substrate concentration on the reaction velocity to the produced β -galactosidase enzyme	49
4.2. Effect of different methods and supports on the immobilization of the produced β -galactosidase enzyme from <i>K. marxianus</i>	53
4.2.1. Effect of Na-alginate concentration on entrapment of the produced β -galactosidase enzyme	53
4.2.2. Retention activity of preparations β -galactosidase enzyme on other different supports	55
4.2.3. Evaluation of immobilized enzyme within Ca-alginate gel beads	57
4.2.3.1. Effect of pH on the activity of immobilized form	58
4.2.3.2. Effect of temperature on the activity of immobilized enzyme within Ca-alginate gel beads	58
4.2.3.3. Effect of substrate concentration on the reaction velocity of immobilized enzyme with Ca-alginate gel beads	61
4.2.3.4. Stability of the immobilized β -galactosidase on different supports	64
4.2.3.5. Effect of incubation periods on the enzymatic hydrolysis of lactose	67
4.2.3.6. Reuse of immobilized β -galactosidase enzyme on different supports	70
5. SUMMARY	73
