

Effect of different seed rates and levels of nitrogen, and phosphorus fertilization on flax powdery mildew under field conditions	37
Statistical analysis of the data	38
a. ANOVA	38
b. Correlation	38
c. Cluster analysis	39
IV. EXPERIMENTAL RESULTS.....	40
1. Survey of flax powdery mildew in different governorates	40
Pathogenesis of <i>Oidium lini</i> on flax.....	41
Identification of teleomorph of <i>O. lini</i>	47
1. Characterization of morphological traits of <i>O. lini</i> compared to those of <i>Erysiphe cichoracearum</i> and <i>Erysiphe polygoni</i>	47
Characterization of morphological traits of <i>O. lini</i> compared to those of <i>E. cichoracearum</i> and <i>E. polygoni</i>	47
2. Characterization of biochemical traits of <i>O. lini</i> compared to those of <i>E. polygoni</i> and <i>E. cichoracearum</i>	59
A. Serological protein patterns.....	59
B. Electrophoretic protein patterns	68
Effect of relative humidity and temperature on spore germination and length of germ tubes.....	68
Evaluation of foliar spraying of some compounds for disease control under field conditions.....	76
Effect of sowing date on susceptibility of flax to powdery mildew.....	88
Reaction of flax genotypes to powdery mildew	88
a. Field evaluation.....	88
b. Greenhouse evaluation.....	92
Relationships of flax powdery mildew to physical and chemical edaphic factors.....	92
Effect of different levels of seed rates, nitrogen fertilization, and phosphorus fertilization on flax powdery mildew under field conditions	98
V. DISCUSSION	109
VI. SUMMARY	124
VII. REFERENCES.....	129
APPENDIX.....	144
ARABIC SUMMARY.....
