I. Introduction	1
II. Review of literature	5
III. Materials and Methods	38
PVX-detection	38
Propagation of infected potato plants	39
Culture media	40
Isolation of meristem tip	42
a. Relative growth measurement	45
b. Inviability and survivals	46
c. Subculturing and PVX-indexing	46
Heat treatment	47
Chemotherapy	49
Etiolation and GA ₃ addition	50
Microtubers productivity of plant materials either freed from or infected with PVX under <u>in vitro</u> conditions	51
IV. Results	53
Effect of size of explant:.....	56
a. on survivals and relative growth	56
b. on development of plantlets	58
c. on inviability and contamination	60
d. on production of PVX-free plantlets	63
Effect of heat treatment:	66
a. on relative growth	67
b. on culture inviability	71
c. on survivals and plantlet development	73
d. on elimination of PVX-free	75
Effect of chemotherapy (thiouracil treatment): ...	78
a. on relative growth	78
b. on inviability	82
c. on survivals and plantlets development	84
d. on production of PVX-free plantlets	86

	Page
Effect of etiolation treatment:	88
a. on shoot length and root number/plantlets ...	89
b. on inviability	89
c. on survivals and plantlets development	93
d. on elimination of PVX-free	93
Potato propagation through in vitro tuberization and microtuber productivity as affected by PVX- elimination	97
V. Discussion	107
VI. Summary	136
VII. References	141
VIII. Arabic summary
