	Page
I. INTRODUCTION	1
II. REVIEW OF LITERATURE	4
2.1- The effect of non-traditional pesticides on certain biological aspects of <i>Spodoptera littoralis</i>	4
2.2- The effect of non-traditional pesticides on feeding activity and nutritional indices	17
III. MATERIALS AND METHODS	34
3.1- Insecticides tested	34
3.2- Maintenance of the insect's cultures	36
3.3- Experimental design	37
3.4- Insecticidal treatments	37
3.5- Experimental procedures	38
3.5.1- Initial and bioresidual activity	38
3.5.2- Latent biological effects	38
3.5.3- Subsidiary effect on feeding activity and nut- ritional indices	39
IV. RESULTS AND DISCUSSION	43
4.1- Initial and bioresidual toxicity of different pesticides on the cotton leafworm larvae	43
4.2- Latent effect of different pesticides on certain developmental aspects in the cotton leafworm biology	52
1- Effect on accumulated larval mortality	52
2- Effect on larval duration	58
3- Effect on larval weight	63
4- Effect on pupation and pupal malformation	66
5- Effect of pupal duration	73
6- Effect on pupal weight	78
7- Effect on pupal mortality	83
8- Effect on adult emergence	88
9- Effect on adult longevity	91
10- Effect on adult fecundity	97
11- Effect on egg-viability	99

CONTENTS : Cont'd.

	Page
4.3- Effect of different pesticides on the consumption, digestion and utilization of food in the larval stage of cotton leafworm different strain	107
4.3.1- Effect on food consumption	107
4.3.2-Effect on consumption index	112
4.3.3- Effect on growth rate	117
4.3.4- Effect on approximate digestibility	122
4.3.5- Effect on efficiency of conversion of inges- ted food	127
4.3.6- Effect of efficiency of conversion of digested food	131
