|-----------------------------------------------------------------------------------------------------------------|-------------|
| INTRODUCTION .....                                                                                              | 1           |
| REVIEW OF LITERATURE .....                                                                                      | 3           |
| - Index of maturity .....                                                                                       | 3           |
| - Changes in physical and chemical properties of<br>" Hindi Be-Sinnara " mango fruits during stor-<br>age ..... | 5           |
| - Effects of gamma irradiation on physical propert-<br>ies of the mango fruits .....                            | 6           |
| - Effects of gamma irradiation on chemical propert-<br>ies of the mango fruits .....                            | 16          |
| - Effects of 2,4-D and GA on physical properties of<br>the mango fruits .....                                   | 19          |
| - Effects of 2,4-D and GA on chemical properties of<br>the mango fruits .....                                   | 24          |
| - Control of mangoes decay with post-harvest treat-<br>ments of Benomyl ( Benlate ) .....                       | 30          |
| - Effects of antitranspirants .....                                                                             | 33          |
| - Respiration and Ripening .....                                                                                | 35          |
| MATERIAL AND METHODS .....                                                                                      | 39          |
| RESULTS AND DISCUSSION .....                                                                                    | 47          |
| I- Effect of post-harvest treatments on physical pro-<br>perties : .....                                        | 47          |
| a) Fruit firmness .....                                                                                         | 47          |
| b) Weight loss .....                                                                                            | 51          |
| c) Decay percentage, quality and shelf-life<br>extension .....                                                  | 54          |

|                                                                       | <u>Page</u> |
|-----------------------------------------------------------------------|-------------|
| II - Effect of post-harvest treatments on chemical properties : ..... | 62          |
| a) Total soluble solids .....                                         | 62          |
| b) Total acidity .....                                                | 66          |
| c) Total carotenoids .....                                            | 69          |
| d) Total phenolic compounds .....                                     | 73          |
| o) Sugars .....                                                       | 75          |
| III- RESPIRATION RATES .....                                          | 81          |
| SUMMARY AND CONCLUSION .....                                          | 92          |
| LITERATURE CITED .....                                                | 96          |
| ARABIC SUMMARY .....                                                  | -           |
