|---------------------------------------------------------------------------------------------------|------------------|
| <b>1. INTRODUCTION .....</b>                                                                      | <b>Page</b><br>1 |
| <b>2. REVIEW OF LITERATURE .....</b>                                                              | 2                |
| 2.1. Salt affected soils .....                                                                    | 2                |
| 2.1.1. Saline soils .....                                                                         | 2                |
| 2.1.1.1. Classification of saline soils .....                                                     | 2                |
| 2.1.2. Non saline-sodic soils .....                                                               | 3                |
| 2.1.2.1. Classification of non saline-sodic soils .....                                           | 5                |
| 2.1.3. Saline-sodic soils .....                                                                   | 6                |
| 2.2. Salinization and sodication processes involved in salt-affected<br>soils .....               | 7                |
| 2.2.1. Salinization process in soils .....                                                        | 7                |
| 2.2.1.1. Irrigation water in relation to soil salinity .....                                      | 7                |
| 2.2.1.2. Soil salinity in relation to ground water .....                                          | 9                |
| 2.2.2. Sodication process in soils .....                                                          | 9                |
| 2.3. Soil hydraulic conductivity in relation to different soil<br>characteristics .....           | 10               |
| 2.3.1. Soil hydraulic conductivity in relation to soil texture .....                              | 10               |
| 2.3.2. Soil hydraulic conductivity in relation to concentration of<br>soluble salts and SAR ..... | 11               |
| 2.3.3. Soil hydraulic conductivity in relation to ESP and pH .....                                | 13               |
| 2.4. Soil salinity and sodicity in relation to elemental composition of<br>plants .....           | 13               |
| 2.4.1. Soil salinity and sodicity in relation to nitrogen content and<br>uptake by plants .....   | 13               |
| 2.4.2. Soil salinity and sodicity in relation to phosphorus content<br>and uptake by plants ..... | 14               |
| 2.4.3. Soil salinity and sodicity in relation to potassium content and<br>uptake by plants .....  | 15               |
| 2.4.4. Soil salinity and sodicity in relation to sodium content and<br>uptake by plants .....     | 16               |
| 2.4.5. Soil salinity and sodicity in relation to calcium content and<br>uptake by plants .....    | 17               |
| 2.4.6. Soil salinity and sodicity in relation to magnesium content and<br>uptake by plants .....  | 18               |
| 2.5. Soil salinity and sodicity in relation to growth and yield of<br>plants .....                | 19               |
| <b>3. MATERIALS AND METHODS .....</b>                                                             | 22               |
| 3.1. Preparation of saline and sodic soil models at different ratios ....                         | 22               |
| 3.2. Sampling of natural saline and sodic soils .....                                             | 24               |

|                                                                                          |            |
|------------------------------------------------------------------------------------------|------------|
| 3.3. Experimental .....                                                                  | Page<br>24 |
| 3.3.1. Assessment of soil salinity and sodicity .....                                    | 24         |
| 3.3.2. Biological experiment .....                                                       | 24         |
| 3.4. Methods of analysis .....                                                           | 24         |
| 3.4.1. Soil analysis .....                                                               | 24         |
| 3.4.2. Plant analysis .....                                                              | 29         |
| 3.5. Statistical and mathematical analyses .....                                         | 30         |
| <b>4. RESULTS AND DISCUSSION</b> .....                                                   | <b>31</b>  |
| 4.1. Different relations of (non sodic) saline-soils .....                               | 31         |
| 4.1.1. Soil salinity in relation to soil characteristics and soil<br>productivity .....  | 31         |
| 4.1.1.1. Soil salinity in relation to soil hydraulic conductivity .....                  | 31         |
| 4.1.1.2. Soil salinity in relation to soil pH .....                                      | 35         |
| 4.1.2. Soil salinity in relation to elemental utilization and soil<br>productivity ..... | 35         |
| 4.1.2.1. Soil salinity in relation to elemental content of barley plants                 | 35         |
| * N-content .....                                                                        | 35         |
| * P-content .....                                                                        | 39         |
| * K-content .....                                                                        | 41         |
| * Na-content .....                                                                       | 41         |
| * Ca-content .....                                                                       | 44         |
| * Mg-content .....                                                                       | 44         |
| 4.1.2.2. Soil salinity in relation to elemental uptake by barley plants                  | 44         |
| * N-uptake .....                                                                         | 44         |
| * P-uptake .....                                                                         | 45         |
| * K-uptake .....                                                                         | 47         |
| * Na-uptake .....                                                                        | 47         |
| * Ca-uptake .....                                                                        | 49         |
| * Mg-uptake .....                                                                        | 49         |
| 4.1.2.3. Hazardous effects due to salinity on dry matter yield of<br>barley plants ..... | 52         |
| 4.2. Different relations of sodic soils .....                                            | 56         |
| 4.2.1. Soil sodicity in relation to soil characteristics and soil<br>productivity .....  | 56         |
| 4.2.1.1. Soil sodicity in relation to soil hydraulic conductivity .....                  | 56         |
| 4.2.1.2. Soil sodicity in relation to soil pH .....                                      | 60         |
| 4.2.2. Soil sodicity in relation to elemental utilization and soil<br>productivity ..... | 64         |
| 4.2.2.1. Soil sodicity in relation to elemental content of barley plants                 | 64         |
| * N-content .....                                                                        | 64         |
| * P-content .....                                                                        | 66         |
| * K-content .....                                                                        | 66         |
| * Na-content .....                                                                       | 67         |

|                                                                                                                              | Page |
|------------------------------------------------------------------------------------------------------------------------------|------|
| * Ca-content .....                                                                                                           | 67   |
| * Mg-content .....                                                                                                           | 70   |
| 4.2.2.2. Soil sodicity in relation to elemental uptake by barley plants .....                                                | 70   |
| * N-uptake .....                                                                                                             | 70   |
| * P-uptake .....                                                                                                             | 72   |
| * K-uptake .....                                                                                                             | 72   |
| * Na-uptake .....                                                                                                            | 72   |
| * Ca-uptake .....                                                                                                            | 73   |
| * Mg-uptake .....                                                                                                            | 76   |
| 4.2.2.3. Hazardous effects due to soil sodicity on dry matter yield of<br>barley plants .....                                | 76   |
| 4.3. Different relations of soil salinity combined with soil sodicity .....                                                  | 81   |
| 4.3.1. Combined effect of soil salinity and sodicity on soil<br>characteristics and soil productivity .....                  | 81   |
| 4.3.1.1. Combined effect of soil salinity and sodicity on soil<br>hydraulic conductivity .....                               | 81   |
| 4.3.1.2. Combined salinity and of soils in relation to soil pH .....                                                         | 85   |
| 4.3.2. Combined salinity and sodicity of soils in relation to<br>elemental utilization by plants and soil productivity ..... | 85   |
| 4.3.2.1. Combined salinity and sodicity of soils in relation to<br>elemental content of barley plants .....                  | 85   |
| * N-content .....                                                                                                            | 89   |
| * P-content .....                                                                                                            | 89   |
| * K-content .....                                                                                                            | 91   |
| * Na-content .....                                                                                                           | 91   |
| * Ca-content .....                                                                                                           | 93   |
| * Mg-content .....                                                                                                           | 93   |
| 4.3.2.2. Combined salinity and sodicity of soils in relation to<br>elemental uptake by barely plants .....                   | 96   |
| * N-uptake .....                                                                                                             | 96   |
| * P-uptake .....                                                                                                             | 96   |
| * K-uptake .....                                                                                                             | 98   |
| * Na-uptake .....                                                                                                            | 98   |
| * Ca-uptake .....                                                                                                            | 100  |
| * Mg-uptake .....                                                                                                            | 100  |
| 4.3.2.3. Combined salinity and sodicity in soils in relation to dry<br>matter yield of barley plants .....                   | 103  |
| 4.4. Validity of equations developed for assessment of soil salinity<br>and sodicity .....                                   | 108  |
| 5. SUMMARY .....                                                                                                             | 113  |
