- INTRODUCTION	1
- REVIEW OF LITERATURE	6
Diapause in relation to the physiology of insects	6
I. Sex ratio and seasonal occurrence of diapause	8
II. Temperature in relation to diapause in insects	11
III. Effect of insecticides on the biology of insects	14
IV. Influence of food quality on insect biology	19
V. Factors influence body contents in insects	23
- MATERIALS AND METHODS	28
Samples obtained and rearing technique	28
I. Sex ratio and seasonal occurrence of diapause	28
a. The sex ratio during the season of 1985	28
b. Normal and abnormal larvae	29
II. Influence of temperature on diapause in the 4th instar larvae of pink bollworm, <u>pectinophora gossypiella</u> (Saund.)	30
III. Effect of sublethal doses of three insecticides on diapause of the 4th instar larvae of <u>pectinophora gossypiella</u> (Saund).	31
a. Insecticides used	32
b. Mortality curves	32
IV. Influence of some allelochemics on the biology of the newly hatching larvae of <u>pectinophora gossypiella</u> (Saund)	34
a. Gossypol	34
b. Coumarin.....	35
V. Comparison between some body components in active, abnormal, coumarin-treated diapausing and out of diapause 4th instar larvae of <u>P. gossypiella</u> (Saund.)	36
- RESULTS AND DISCUSSION	40
I. The sex-ratio of <u>pectinophora gossypiella</u> (Saunders) during the cotton season in 1985	40

CONTENTS : Cont'd.

Page

II. The effect of different constant temperatures on the biology of the fourth-instar larvae of <u>P.gossypiella</u> (Saund.)	47
1. Larval weights	47
2. The duration period of the 4th instar larvae...	50
3. The pupal stage	51
a. Pupation percentage	51
b. Pupal mortalities	51
c. Pupation period	53
d. Weight of pupae.....	53
4. Moth emergence and malformation	54
5. The effect of temperature on percentage of diapausing larvae of <u>P. gossypiella</u> (Saund).	55 ✓
a. Larvae entering diapause	56
b. Larvae in extended diapause	57
6. The effect of temperature on the total mortality	58 ✓
III. The effect of sublethal doses of insecticides on the biology of the fourth instar larvae of pink bollworm, <u>pectinophora gossypiella</u> (Saunders).....	60
1. Log-dose; probit mortality lines (Ld-P)	61
2. Mortalities after 24 hours	66
3. Larval weight after one week of treatment	68
4. Duration period of the <u>4th</u> instar larvae	69
5. Pupal stage	73
6. Moth emergence and malformation	80
7. Effect on percentage of diapausing larvae	82 /
8. Total mortalities after 6 months	89 /

IV. Influence of some allelochemicals on the biology of the newly hatching larvae <u>P. gossypiella</u> (Saund).	92
1. Effect on surviving percentages	93 /
2. Effect on larval duration	96 /
3. Larval weight	98
4. Percentage pupation in survivals	100
5. Pupal weight	101
6. Percentage of malformed pupae	101
7. Duration of pupal stage	102
8. Moths eclosion	103
9. Percentage of moth malformations	104
10. Percentage of larvae exceeding 30 days	105
11. The influence of gossypol or coumarin on fecundity and fertility of <u>pectinophora gossypiella</u> (Saund).	107 /
1. Hatchability	109
2. The effect of gossypol or coumarin on mating	110 /
3. Percentage of mating frequency	111 /
V. Comparison between some body contents in different physiological cases of the 4th instar larvae of <u>P. gossypiella</u> (Saunders).....	115
1. Fresh/dry weight and water percent	115
2. Amino acids	118

<u>LIST OF TABLES:</u>	<u>Page</u>
Table (1):	
The sex ratio of <u>Pectinophora gossypiella</u>	
(Saunders) during the period june -	
December, 1985	41
.....	42
Table (2) :	
The effect of three constant temperatures	
on the larval stages and diapausing larvae	
of <u>P.gossypiella</u> (Saunders).....	48
Table (3):	
Effect of three constant temperatures on	
pupae and moths of <u>P.gossypiella</u> (Saunders)	
.....	52
Table (4):	
The effect of sublethal doses of insectic-	
ides on the 4th instar larvae of the pink	
bollworm (males).....	67
Table (5):	
The effect of sublethal doses of insect-	
icides on pupae and moths of the pink	
bollworm larvae (males).....	70
Table (6):	
The effect of sublethal doses of insect-	
icides on the 4th instar larvae of the	
pink bollworm (females).....	71
Table (7):	
The effect of sublethal doses of insect-	
icids on pupae and moths of the pink boll-	
worm (females).....	72

<u>LIST OF TABLES CONT'D:</u>	<u>Page</u>
Table (8):	
The effect of sublethal doses on diapausing male larvae and total mortality of the pink bollworm	74
Table (9):	
The effect of sublethal doses on diapausing female larvae and total mortality of the pink bollworm	75
Table (10):	
The effect of adding gossypol/coumarin to the artificial diet on the biology of <i>P. gossypiella</i> (Saunders)	94
Table (11):	
The influence of adding Gossypol/coumarin to the artificial diet on fecundity and fertility of <i>P. gossypiella</i> (Saunders)...	108
Table (12):	
Fresh/dry weights and water percentage of the fourth instar larvae of <u><i>P.gossypiella</i></u> (Saunders) at different physiological cases.	117
Table (13):	
Comparison of amino acids ($\mu\text{g}\%$) in different physiological cases of the 4th instar larvae of <i>P.gossypiella</i> (saunders)	124

<u>LIST OF FIGURES:</u>	<u>Page</u>
Figure (1) : Relalive distribution of male and female, normal/abnormal larvae of P. gossypiella (saunders) in 1985 season	43
Figure (2) : Log dose -probit mortality lines for P. gossypiella larvae treated with cypermethrin	62
Figure (3) : Log dose-probit mortality lines for P.gossyprella larvae treated with fenvalerate	63
Figure (4) : Log dose- probit mortality lines for P. gossypiella larvae treated with chlorpyrifos	64
Figure (5) : Log dose- propit mortality lines for P. gossypiella larvae reared on diet containing concentrations of coumarin and gossypol	95
