1	INTRODUCTION	1
2	REVIEW OF LITERATURE	9
	1- Effect of growth regulators on germination and growth of pine seedlings	9
	2- Effect of growth regulators on cambial activity and Xylem formation in pine stem.	25
	3 – Effect of growth regulators on the anatomy of pine plant.	32
3	MATERIAL AND METHODS	36
	• first experiment.	36
	Seedling emergency.	36
	Phytohormones determention.	38
	Endogenous phytohormones.	39
	Extraction procedure.	36
	Methylation with diqzomethane.	40
	• Histological study.	41
	Methods of preparation.	41
	• Scand experiment.	42
	• Growth behavior at 12 months of plant age.	42
	• Growth behavior at 30 months of plant age	42
	• Dry matter distribution.	43
	• Statistical analysis.	44
4	RESULT AND DISCUSSION.	45
	I – Effect of growth regulators on germination of pinus spp. .	45
	II – Growth behavior at 12 months on plant age.	48
	A- <i>Pinus pinea</i>	48
	1- Plant height.	48
	2- Stem diameter.	50
	3- Number of branches.	50
	4- Number of leaves.	53
	B – <i>Pinus brutia</i> .	53
	1- Plant height.	53
	2- Stem diameter.	54
	3- Number of branches.	54
	4- Number of leaves.	58
	III – Growth behavior at 30 months of plant age.	58
	1- <i>Pinus pinea</i> .	58
	a- Shoots	58
	1- Stems (main stem and branches).	58
	2- Leaves.	62
	B- Roots.	62
	2 – <i>Pinus brutia</i> .	63
	a- Shoots	63
	1- Stems (main stem and branches).	63
	2- Leaves.	68
	B- Roots.	70
	V – Dry matter distribution.	73

	IV – Endogens phytohormons.	77
	IIV- Histological study.	78
	A - <i>Pinus pinea</i> .	78
	1- Roots.	78
	2- Stems	82
	B - <i>Pinus brutia</i> .	83
