|-----------------------------------------------------------------------------------------------------------------|-------------|
| I. INTRODUCTION .....                                                                                           | 1           |
| II. REVIEW OF LITERATURE .....                                                                                  | 3           |
| 2.1. Ecological studies .....                                                                                   | 3           |
| 2.1.1. Preference of the potato tuber moth to<br>solanaceous crops .....                                        | 3           |
| 2.1.2. Susceptibility of different potato var-<br>ieties to potato tuber moth infestation. ....                 | 5           |
| 2.2. Biological studies .....                                                                                   | 8           |
| III. METHODS AND TECHNIQUE .....                                                                                | 18          |
| 3.1. Ecological studies .....                                                                                   | 18          |
| 3.2. Biological studies .....                                                                                   | 22          |
| IV. RESULTS AND DISCUSSION .....                                                                                | 26          |
| 4.1. Ecological studies .....                                                                                   | 26          |
| 4.1.1. Preference of the potato tuber moth to<br>solanaceous crops .....                                        | 26          |
| 4.1.2. Susceptibility of different potato<br>varieties to potato tuber moth infesta-<br>tion .....              | 31          |
| 4.2. Biological studies .....                                                                                   | 44          |
| 4.2.1. Infestation and type of injury .....                                                                     | 44          |
| 4.2.2. Breeding <u>P. operculella</u> (Zell.) on<br>different host plants under different<br>temperatures ..... | 47          |
| a. The first generation .....                                                                                   | 47          |
| The larval stage .....                                                                                          | 47          |
| The pupal stage .....                                                                                           | 63          |
| The adult stage .....                                                                                           | 71          |
