INTRODUCTION	1
REVIEW OF LITERATURE	3
1. Acarological studies	3
1.1. Population dynamics of soil Acari under field crops.....	3
1.2. Soil fertilizers as factors affecting soil Acari population	9
1.2.1. Nitrogenous fertilizer.....	9
1.2.2. Phosphorus fertilizer.....	13
1.3. Occurrence of Astigmata.....	14
2. Nematological studies	17
2.1. Plant parasitic nematodes associated with some field and vegetable crops	17
2.2.2. Influence of fertilizers on nematodes.....	19
2.2.3. Influence of plant extraction on nematodes.....	23
2.2.4. Influence of dried material on nematodes.....	27
MATERIAL AND METHODS	30
1. Acarological studies	30
1.1. Field experiments.....	30
1.1.1 Onion field.....	30
1.1.2 Fodder beet	31
1.2. Effect of fertilizers on soil Acari.....	31
1.3. Sampling, Extraction and Enumeration of mites.....	31
2. Nematological studies	33
2.1. Survey of nematodes.....	33
2.1.1 Samples collection.....	33
2.1.2 Nematode extraction and identification.....	33
2.2. Preparation of plant materials.....	33
2.3. Preparation of plant extracts for the bioassay on nematode <i>Meloidogyne</i>	
<i>incognita</i>	34
2.4. <i>In vitro</i> bioassay	34
2.5. Greenhouse test.....	35

RESULTS AND DISCUSSION	36
1. Acarological studies	36
1.1 Population density of soil mites associated with some field crops	36
1.1.1 In onion	36
1.1.2 In fodder beet	43
1.1.3 In broad bean	47
1.1.4 Flactuation of soil mites under certain field crops	50
1.2 Effect of soil fertilizers on population density of soil Acari concomitanted with some field crops	52
1.2.1. Effect of nitrogenous fertilizers on soil Acari inhabiting two cultivars of onion fields	52
1.2.2. Effect of urea plus potassium sulphate on population density of soil Acari in fodder beet field	56
1.3. Qualitative and quantiative composition of astigmatid mites inhabiting onion, fodder beet and broad bean fields	60
1.3.1. Effect of transplanting date of onion Giza 6 and Giza 20 on population density and species composition of Astigmata mites	60
1.3.2. Population dynamics of astigmatid mite species associated with fodder beet and broad bean fields	65
1.4. Effect of soil fertilizers on population dynamics of Astigmata in onion and fodder beet fields	67
1.4.1. Influence of onion nitrogenous fertilizer (ammonium nitrate) on the population density of soil astigmatid mite species	67
1.4.2. Effect of urea plus potassium sulphate on population density of Astigmata inhabiting fodder beet field	70
2. Nematological studies	73
2.1 Survey	73
2.1.1 Frequency, occurrence and population density of plant parasitic nematodes associated with three crops plants	73
2.1.2 Effect of transplanting date of two onion cultivars on nematode population in soil	73
2.1.3. Population density of soil nematodes associated with fodder beet	80
2.1.4. Population density of soil nematodes inhabiting broad bean fields	83
2.2. Influence of fertilizer on nematode	86
2.2.1. Effect of ammonium nitrate on nematodes population density in soil with two onion cultivars	86
2.2.2. Effect of application of urea and potassium sulphate combination on nematode population density in fodder beet	90

2.3.	Effect of plant extracts on egg hatchability, juveniles mortality and juveniles emergence of <i>Meloidogyne incognita</i>	93
2.4	Effect of dried powder of some plant parts on the development of root-knot nematode infected sunflower	97
2.4.1.	Effect of development of <i>M. incognita</i>	97
2.4.2.	Effect on plant growth	100
SUMMARY AND CONCLUSION		104
1	Acarological results	104
2	Nematological results	108
