

CONTENTS

	Page
1-Introduction	1
2-Review of Literature	3
2.1. Biological studies of Tetranychid mites	3
2.2. Effect of spider mite infestation on yield	8
2.3. Plant resistance to Tetranychid mites	10
2.4. Nature of plant resistance to mite infestation	17
2.4.1. Physical characteristics	17
2.4.2. Chemical characteristics	18
3-Material and Methods	21
3.1. Phaseolus genotypes	21
3.2. Experimental procedures	22
3.2.1. Biological, Histological and Chemical analysis studies ..	22
3.2.1.1 Biological studies	22
3.2.1.2. Histological studies	25
3.2.1.3 Chemical analysis	25
3.2.1.4. Statistical procedure	26
3.2.2. Resistance studies of <i>Phaseolus</i> genotypes to the infestation with the red spider mite <i>T. urticae</i> (Koch). ..	26
3.2.2.1. The Artificial infestation	27
3.2.2.2. Acaricidal Treatments	29
4-Results and Discussion	30
4.1. Biological, Histological and Chemical studies	30
4.1.1. Biological studies	30
4.1.2. Histological studies	45
4.1.2.1. Thickness of leaf epidermis.....	45
4.1.2.2. Density of the leaf hairs	48
4.1.2.3. Length the of the leaf hairs	49
4.1.2.4. Relationship between biological and histological aspects of leaves	57
4.1.3. Chemical composition of leaves	59
4.2. Plant Resistance of <i>Phaseolus</i> genotypes to the red spider mite (<i>T. urticae</i>) infestation.	68
4.2.1. Density of mite eggs/inch ² of plant leaf area)	68
4.2.2. Density of moving individuals / inch ²	72
4.2.3. Plant characteristics in relation to its Resistance to the red spider mite <i>T. urticae</i>	78
4.2.3.1. Fresh weight / plant	78
