|                                                                                | PAGE |
|--------------------------------------------------------------------------------|------|
| 1- INTRODUCTION.....                                                           | 1    |
| 2- REVIEW OF LITERATURE.....                                                   | 3    |
| 2.1 Effect of irrigation level and cultivar on:.....                           | 3    |
| 2.1.1. Vegetative growth of tomato plants.....                                 | 3    |
| 2.1.2. Mineral content of plant foliage (N,P and<br>K).....                    | 4    |
| 2.1.3. Fruit yield and its components.....                                     | 5    |
| 2.1.4. Fruit quality characteristics:.....                                     | 10   |
| 2.1.4.1. Fruit cracking.....                                                   | 10   |
| 2.1.4.2. Physical characteristics.....                                         | 15   |
| 2.1.4.3. Chemical constituents (TSS, Vitamin-C<br>and titratable acidity)..... | 16   |
| 3. MATERIALS AND METHODS.....                                                  | 19   |
| 3.1. Experimental treatments.....                                              | 19   |
| 3.2. Data recorded.....                                                        | 21   |
| 3.3. Statistical analysis.....                                                 | 25   |

|                                                                                                                |    |
|----------------------------------------------------------------------------------------------------------------|----|
| 4. RESULTS AND DISCUSSION.....                                                                                 | 26 |
| 4.1. Vegetative growth.....                                                                                    | 26 |
| 4.1.1. Effect of irrigation level on tomato plant<br>growth.....                                               | 26 |
| 4.1.2. Effect of cultivar on vegetative growth of<br>tomato plant.....                                         | 30 |
| 4.1.3. Effect of irrigation level within cultivar<br>on vegetative growth of tomato plant.....                 | 34 |
| 4.2. Mineral content of tomato plant foliage:.....                                                             | 40 |
| 4.2.1. Effect of irrigation level on N, P and K<br>content of tomato plant foliage.....                        | 40 |
| 4.2.2. Effect of cultivar on N, P and K content<br>of tomato plant foliage.....                                | 45 |
| 4.2.3. Effect of irrigation level within cultivar<br>on N, P and K content of tomato plant<br>foliage.....     | 50 |
| 4.3. Fruit yield and its components.....                                                                       | 57 |
| 4.3.1. Effect of irrigation level on early,<br>marketable and total fruit yields.....                          | 57 |
| 4.3.2. Effect of cultivar on early, marketable<br>and total fruit yields.....                                  | 62 |
| 4.3.3. Effect of irrigation level within cultivar<br>on early, marketable and total fruit yields <sup>70</sup> |    |

|                                                                                                                                | PAGE |
|--------------------------------------------------------------------------------------------------------------------------------|------|
| 4.4. Fruit quality characteristics.....                                                                                        | 79   |
| 4.4.1. Fruit cracking.....                                                                                                     | 79   |
| 4.4.1.1. Effect of irrigation level on cracking,<br>sunburn and other disorders of tomato<br>fruits.....                       | 79   |
| 4.4.1.2. Effect of cultivar on cracking, sunburn<br>and other disorders of tomato fruits..                                     | 90   |
| 4.4.1.3. Effect of irrigation level within<br>cultivar on fruit cracking, sunburn<br>and other disorders of tomato fruits..    | 92   |
| 4.4.2. Physical characteristics of tomato fruits.                                                                              | 92   |
| 4.4.2.1. Effect of irrigation level on physical<br>characteristics of tomato fruits.....                                       | 98   |
| 4.4.2.2. Effect of cultivar on physical<br>characteristics of tomato fruits.....                                               | 101  |
| 4.4.2.3. Effect of irrigation level within culti-<br>var on physical characteristics of<br>tomato fruits.....                  | 105  |
| 4.4.3. Chemical constituents of tomato fruits....                                                                              | 109  |
| 4.4.3.1. Effect of irrigation level on chemical<br>constituents of tomato fruit; TSS,<br>Vitamin-C and titratable acidity..... | 109  |
| 4.4.3.2. Effect of cultivar on chemical constit-<br>uents of tomato fruits; TSS, Vitamin-C<br>and titratable acidity.....      | 111  |
