1-INTRODUCTION-----	1
---------------------	---

II- REVIEW OF LITERATURE-----	3
-------------------------------	---

1- Economic importance and biology of <i>P.</i>	
---	--

<i>operculella</i> -----	3
--------------------------	---

2-Control of the potato tuber moth,	
-------------------------------------	--

<i>P.operculella</i> -----	5
----------------------------	---

3-Development of insect resistance to	
---------------------------------------	--

pesticides-----	19
-----------------	----

4-Cross- resistance to pesticides -----	26
---	----

5-Biochemical studies-----	29
----------------------------	----

5.1- Total esterase -----	29
---------------------------	----

5.2 – Glutathione s-transferase-----	33
--------------------------------------	----

III . MATERIALS AND METHODS-----	36
1-Rearing technique-----	36
2-Insect rearing -----	36
3-Chemicals used -----	37
4-Toxicological studies-----	39
4.1 – Eggs-----	40
4.2- Newly hatched larvae-----	40
5-Selection procedure-----	42
6-Cross- resistance procedure-----	43
7-Biochemical studies-----	44
7.1- Determination of alpha esterase activity.	44
7.2- Determination of GTS activity-----	47
IV. RESULTS AND DISCUSSION-----	50
1-Rate of development of resistance-----	50

1.1- Rate of development of resistance to
fenitrothion-----50

1.2 – Rate of development of resistance to
profenofos ----- 54

1.3- Rate of development of resistance to
Neem-Azal (Azadirachtin) -----56

1.4- Rate of development of resistance to Dipel
2X (*Bacillus thuringiensis*)-----58

**1-Cross- resistance to different
pesticides in parent strain and selected
strains of *Phthorimaea operculella* -- 61**

2.1- Pattern of cross- resistance to pesticides in
fenitrothion resistance strain of P. operculella-
-----62

2.2- Pattern of cross- resistance to pesticides in profenofos resistance strain of <i>P. operculella</i> -----	65
2.3- Pattern of cross- resistance to pesticides in the Neemazal (Azadirachtine) resistant strain of <i>P. operculella</i> -----	68
2.4- Pattern of cross- resistance to pesticides in the Dipel 2X resistant strain of <i>P. operculella</i> -----	71
1-Biochemical studies on resistant <i>P. operculella</i> -----	74
3.1- Alpha- esterase activity -----	74
3.2- Glutathione s-transferase activity----	78
V- SUMMARY-----	84
