|------------------------------------------------------------------|------|
| I. INTRODUCTION .....                                            | 1    |
| II. REVIEW OF LITERATURE .....                                   | 3    |
| III. MATERIAL AND METHODS .....                                  | 24   |
| IV. RESULTS AND DISCUSSION .....                                 | 32   |
| IV.I. Surface sterilization .....                                | 32   |
| IV.I.I. Hansen 536 peach rootstock .....                         | 32   |
| IV.I.I.a shoot tip .....                                         | 32   |
| IV.I.I.b stem node section .....                                 | 33   |
| IV.I.I.I. MAC9 apple rootstock .....                             | 34   |
| IV.I.I.I.a shoot tip .....                                       | 34   |
| IV.I.I.I.b stem node section .....                               | 35   |
| IV.II. Establishment stage .....                                 | 48   |
| IV.II.1. Effect of BAP or 2ip solely .....                       | 48   |
| 1.1. Hansen 536 peach rootstock .....                            | 48   |
| 1.1.a shoot tip .....                                            | 48   |
| 1.1.b stem node section .....                                    | 49   |
| 1.1.1. MAC9 apple rootstock .....                                | 55   |
| 1.1.1.a shoot tip .....                                          | 55   |
| 1.1.1.b stem node section .....                                  | 56   |
| IV.II. Effect of different combinations between BAP and 2ip..... | 61   |
| 1.1.1. Hansen 536 peach rootstock .....                          | 61   |
| 1.1.1.a shoot tip .....                                          | 61   |

|                                                                         |            |
|-------------------------------------------------------------------------|------------|
| 1.1.1.b stem node section .....                                         | 64         |
| 1.1.1.1. MAC9 apple rootstock .....                                     | 64         |
| 1.1.1.1.a shoot tip .....                                               | 64         |
| 1.1.1.1.b stem node section .....                                       | 65         |
| IV.III. Proliferation stage .....                                       | 70         |
| IV.III.1. Hansen 536 peach rootstock .....                              | 70         |
| MAC9 apple rootstock .....                                              | 73         |
| IV.III.1.1. Effect of subculture number on shoot Proliferation...       | 74         |
| IV.II.II. Rooting stage.....                                            | 85         |
| II.1.Hansen 536 peach rootstock .....                                   | 85         |
| 1.a. Effect of combination between IBA and NAA on shoot rooting. ....   | 85         |
| 1.b. Effect of combination between IBA and PG on shoot rooting. ....    | 88         |
| II.1.1. MAC9 apple rootstock .....                                      | 88         |
| 1.1.a. Effect of combination between IBA and NAA on shoot rooting. .... | 88         |
| 1.1.b. Effect of combination between IBA and PG on shoot rooting. ....  | 93         |
| IV.II.III. Acclimatization stage .....                                  | 94         |
| <b>V. SUMMARY AND CONCIUSION .....</b>                                  | <b>103</b> |
| <b>VI. LITERATURE CITED .....</b>                                       | <b>110</b> |
| <b>ARABIC SUMMARY .....</b>                                             |            |
