LIST OF FIGURES	
 CHAPTER	
I.INTRODUCTION	1
 II. REVIEW OF LITERATURE	7
2.1. TAMARIND (<i>TAMARINDUS INDICA</i> L.)	7
2.1.1. Chemical composition of tamarind pods and their structure..	7
2.1.1.1. Tamarind pods	8
2.1.1.2. Tamarind pulp	10
2.1.1.3. Tamarind extract	11
2.1.2. Chemical constituents of tamarind components.....	11
2.1.2.1. Sugars	11
2.1.2.2. Essential minerals.....	13
2.1.3. Volatile components of tamarind	15
2.2. CAROB (<i>CERATONIA SILIQUA</i> L.)	16
2.2.1. Chemical composition of carob pods and their structure.....	16
2.2.1.1. Carob pods	16
2.2.1.2. Carob pulp (Kibble)	17
2.2.1.3. Carob seeds	17
2.2.1.4. Carob extracts	18
2.2.2. Chemical constituents of carob	18
2.2.2.1. Sugars	19
2.2.2.2. Essential minerals....	19
2.2.3. Volatile components of carob.....	20
2.2.4. Microbiological quality of beverages.....	

III. MATERIALS AND METHODS	21
3.1. Materials	21
3.1.1. TAMARIND.....	21
3.1.1.1. Dried compressed packaged mixed tamarind pulp (<i>Tamarindus indica</i> L. variety Makham waan)....	21
3.1.1.2. Egyptian local dried compressed packaged mixed tamarind pulp (<i>Tamarindus indica</i> L. variety Aswany)	21
3.1.1.3. Random locally-prepared tamarind beverages	21
3.1.2. CAROB.....	21
3.1.2.1. Dried whole and crushed fruits of carob	21
3.1.2.2. Random locally-prepared carob beverage survey samples	21
3.2. Additives and ingredients.....	22
3.3. Methods	22
3.3.1. Preparation of raw materials	22
3.3.2. Methods of procedure	23
3.3.2.1. Determination of optimum extraction parameters	23
3.3.2.1.1. Flotation ratio	23
3.3.2.1.2. Temperature of extraction.....	23
3.3.2.1.3. Extraction periods.....	23
3.3.2.1.4. pH medium of extraction.....	23
3.3.2.1.5. Extraction by steeping (soaking).....	23
3.3.2.2. Analysis of beverages.....	24
3.3.2.3. Survey market study of tamarind and carob beverages	24
3.3.2.4. Technological experiments for preparation of new products	24
3.3.3. Analytical methods	24
3.3.3.1. Chemical analysis	24
3.3.3.2. Determination of total and reducing sugars	24
3.3.3.3. Determination of crude fibers	25
3.3.3.4. Determination of total soluble solids	25
3.3.3.5. Determination of pH value	25
3.3.3.6. Determination of titratable acidity	25
3.3.3.7. Determination of color index.....	25
3.3.3.8. Determination of specific gravity.....	26
3.3.3.9. Determination of ascorbic acid	26

3.3.3.10. Determination of total anthocyanins	26
3.3.3.11. Determination of tannins	26
3.3.4. Determination of essential minerals.....	27
3.3.4.1. Preparation of samples.....	27
3.3.4.2. Spectrophotometric determination of phosphorus.....	27
3.3.4.3. Determination of minerals matter by atomic absorption Spectroscopy.....	28
3.3.5. Determination of volatile components.....	28
3.3.5.1. Extraction of volatile compounds.....	28
3.3.5.2. Combined gas chromatography-mass spectrometry.....	29
3.3.6. Microbiological methods	29
3.3.6.1. Preparation and dilution of samples.....	29
3.3.6.2. Enumeration of aerobic bacteria count.....	29
3.3.6.3. Moulds and yeasts	30
3.3.6.4. Staphylococcus aureus	30
3.3.6.5. Psychrophilic bacteria	30
3.3.6.6. Sporformer bacteria	30
3.3.6.7. Coliform bacteria	30
3.3.6.8. Lactic acid bacteria	31
3.3.7. Sensory evaluation	31
3.3.8. Statistical analysis	31

IV. RESULTS AND DISCUSSION

Part I:

4.1. Tamarind

4.1.1. Physicochemical analysis of tamarind	35
4.1.1.1. Proximate chemical composition.....	35
4.1.1.2. Crude fibers content.....	37
4.1.1.3. Total, reducing and non-reducing soluble sugars.....	37
4.1.1.4. Titratable acidity and pH value.....	37
4.1.1.5. Ascorbic acid and tannins.....	38
4.1.1.6. Color index and anthocynin content.....	38
4.1.2. Microbiological quality of tamarind pulp.....	39
4.1.3. Chemical analysis of tamarind seeds.....	39
4.1.3.1. Proximate chemical composition	39

4.1.3.2. Total, reducing and non-reducing soluble sugars.....	41
4.1.4. Establishment of optimum extraction conditions of tamarind pulp	43
4.1.4.1. Extractability of the Indian tamarind variety.....	43
4.1.4.1.1. Effect of flotation ratio (water: pulp) on extraction rate ...	43
4.1.4.1.2. Effect of temperature degree on extraction rate	49
4.1.4.1.3. Effect of extraction periods on extraction rate	52
4.1.4.1.4. Effect of pH medium on extraction rate	58
4.1.4.2. Extractability of Egyptian tamarind Aswany variety.....	61
4.1.4.2.1. Effect of flotation ratio (water: pulp) on extraction rate	61
4.1.4.2.2. Effect of temperature degree on extraction rate	67
4.1.4.2.3. Effect of extraction periods on extraction rate	70
4.1.4.2.4. Effect of pH medium on extraction rate variety.....	75
4.1.4.3. Effect of different extraction conditions on sensory evaluation for tamarind extracts.....	78
4.1.5. Survey study of tamarind beverage samples collected from some Egyptian local markets.....	82
4.1.5.1. Survey study on natural tamarind beverages.....	84
4.1.5.1.1. Physicochemical properties	84
4.1.5.1.2. Microbiological quality	84
4.1.5.2. Synthetic tamarind beverages.....	87
4.1.5.2.1. Physicochemical properties.....	87
4.1.5.2.2. Microbiological quality	89
4.1.5.3. Comparison between characteristics of natural and synthetic tamarind beverages	91
4.1.6. Essential minerals of tamarind pulp.....	93
4.1.7. Study of volatiles components of tamarind pulp	97

Part II:

4.2. Carob

4.2.1. Physicochemical analysis of carob materials used in the experimental preparation of beverages.....	104
4.2.1.1. Proximate chemical composition.....	104
4.2.1.2. Total sugars, reducing and non-reducing sugars.....	106
4.2.1.3. Titratable acidity and pH value.....	106
4.2.1.4. Color index and anthocynin content.....	106

4.2.2. Microbiological quality of carob pulp.....	106
4.2.3. Chemical analysis of carob seeds.....	108
4.2.3.1. Proximate chemical composition	108
4.2.4. Establishment of optimum extraction conditions of carob pulp...	110
4.2.4.1. Extractability of the Cyprian whole carob Tylliria variety.....	110
4.2.4.1.1. Effect of flotation ratio (water: pulp) on extraction rate	110
4.2.4.1.2. Effect of temperature degree on extraction rate	115
4.2.4.1.3. Effect of extraction periods on extraction rate	118
4.2.4.1.4. Effect of pH medium on extraction rate	124
4.2.4.2. Extractability of the Cyprian crushed carob Tylliria variety.....	127
4.2.4.2.1. Effect of flotation ratio (water: pulp) on extraction rate	127
4.2.4.2.2. Effect of temperature degree on extraction rate	133
4.2.4.2.3. Effect of extraction periods on extraction rate	133
4.2.4.2.4. Effect of pH medium on extraction rate	141
4.2.4.3. Effect of different extraction conditions on sensory evaluation for carob extract.....	144
4.2.5. Survey study of carob beverage samples collected from some Egyptian local markets.....	149
4.2.5.1. Physicochemical properties	149
4.2.5.2. Microbiological quality	151
4.2.6. Essential minerals of carob pulp.....	153
4.2.7. Study of volatiles components of carob pulp.....	156
4.2.8. Technological feasibility for producing new products from tamarind and carob.....	163
V. ENGLISH SUMMARY.....	167
VI. CONCLUSIONS AND RECOMMENDATIONS.....	183
VII. REFERENCES.....	187
VIII. APPENDECES.....	197
APPENDIX I: LIST OF ABBREVIATIONS	197
IX. ARABIC SUMMARY
