|-----------------------------------------------------------------------------------------|----------|
| <b>I- INTRODUCTION.....</b>                                                             | <b>1</b> |
| <b>II- REVIEW OF LITERATURE.....</b>                                                    | <b>3</b> |
| 2-1- Macronutrient fertilizers.....                                                     | 3        |
| 2-1-1- Nitrogen fertilizers.....                                                        | 3        |
| 2-1-1-1- Types of nitrogen fertilizers.....                                             | 3        |
| 2-1-1-2- Dominant pollutants in the nitrogen fertilizers.....                           | 4        |
| 2-1-2- Phosphate fertilizers.....                                                       | 5        |
| 2-1-2-1- Types of phosphate fertilizers.....                                            | 5        |
| 2-1-2-2- Dominant pollutants in the phosphate fertilizers.....                          | 5        |
| 2-1-3- Potassium fertilizers.....                                                       | 7        |
| 2-1-3-1- Types of potassium fertilizers.....                                            | 7        |
| 2-1-3-2- Dominant pollutants in potassium fertilizers.                                  | 8        |
| 2-2- Effect of addition of N, P, and K fertilizers on soil contents of N, P and K.....  | 8        |
| 2-2-1- Forms and contents of nitrogen in soils.....                                     | 8        |
| 2-2-2- Forms and contents phosphorus in soils.....                                      | 9        |
| 2-2-3- Forms and contents of potassium in soils.....                                    | 10       |
| 2-3- Effect of the applied of mineral fertilizers on soil contents of heavy metals..... | 12       |
| 2-4- Effect of N, P and K fertilizers on plant uptake of N, P and K.....                | 14       |

|                                                                                       | <b>Page</b> |
|---------------------------------------------------------------------------------------|-------------|
| 2-5- Effect of N, P and K mineral fertilizers on<br>plant uptake of heavy metals..... | 15          |
| 2-6- Losses of mineral fertilizers in drainage<br>water.....                          | 17          |
| 2-6-1- Nitrogen fertilizers.....                                                      | 17          |
| 2-6-2- Phosphate fertilizers.....                                                     | 19          |
| 2-6-3- Potassium fertilizers.....                                                     | 19          |
| 2-7- Mineral fertilizers consumption in Egypt.....                                    | 20          |
| 2-8- Heavy metals Exposure pathways and<br>assessment.....                            | 22          |
| 2-9- Heavy metals and human health aspect.....                                        | 23          |
| 2-9-1- Cadmium.....                                                                   | 24          |
| 2-9-2- Lead.....                                                                      | 25          |
| 2-9-3- Cobalt.....                                                                    | 25          |
| 2-9-4- Nickel.....                                                                    | 25          |
| 2-10- Heavy metals Guideline.....                                                     | 26          |
| 2-10-1- Guideline of heavy metals in fertilizers.....                                 | 26          |
| 2-10-2- Guideline of heavy metals in soils.....                                       | 27          |
| 2-10-3- Guideline of heavy metals in plants.....                                      | 29          |
| 3- <b>MATERIALS AND METHODS.....</b>                                                  | <b>31</b>   |
| 3-1- Mineral fertilizers.....                                                         | 31          |
| 3-2- Soil water and plant samples.....                                                | 31          |
| 3-3- Methods of analyses.....                                                         | 35          |
| 3-3- 1- Fertilizers analyses.....                                                     | 35          |
| 3-3-2- Soil analyses.....                                                             | 35          |

|                                                                                                                                               | <b>Page</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 3-3-2-1- Physical analyses.....                                                                                                               | 35          |
| 3-3-2-2- Chemical analyses.....                                                                                                               | 36          |
| 3-3-3- Plant analyses.....                                                                                                                    | 37          |
| 3-3-4- Drainage Water analyses.....                                                                                                           | 37          |
| 3-4- Human health aspect.....                                                                                                                 | 37          |
| 3-4-1- Exposure assessment parameter.....                                                                                                     | 39          |
| 3-4-2- RfD parameter.....                                                                                                                     | 39          |
| 3-5- Statistical analyses.....                                                                                                                | 40          |
| <b>4- RESULTS AND DISCUSSION.....</b>                                                                                                         | <b>41</b>   |
| 4-1- Survey of mineral fertilizers.....                                                                                                       | 41          |
| 4-1-1- Nitrogen fertilizers.....                                                                                                              | 41          |
| 4-1-2- Phosphate fertilizers.....                                                                                                             | 46          |
| 4-1-3- Potassium fertilizers.....                                                                                                             | 52          |
| 4-2- Effect of long use term of mineral fertilizers<br>in different cultivated soils on their contents<br>of N, P, K and heavy metals.....    | 60          |
| 4-2-1- Total contents of the investigated elements...                                                                                         | 60          |
| 4-2-2- AB-DTPA extractable elements.....                                                                                                      | 70          |
| 4-3- Effect of long use term of mineral fertilizers<br>in different soils on N, P, K and heavy metal<br>contents of plants grown thereon..... | 74          |
| 4-4- Effect of long use term of mineral fertilizers<br>in different soils on N, P, K and heavy metal<br>contents of their drained water.....  | 77          |
| 4-5- Human health aspects.....                                                                                                                | 79          |

|                                                                 | <b>Page</b> |
|-----------------------------------------------------------------|-------------|
| 4-5-1- Sandy soils (Cultivation period <5 years).....           | 79          |
| 4-5-2- Sandy soils (Cultivation period 10 years) ....           | 79          |
| 4-5-3- Sandy soils (cultivation period >20 years) ...           | 82          |
| 4-5-4- Calcareous soils (Cultivation period <5<br>years) .....  | 82          |
