

Contents

Chapter 1: Introduction	Page
1.1. Literature Survey for determination of Amikacin	1
1.2. Literature Survey for determination of Neomycin	7
1.3. Literature Survey for determination of Tobramycin	15
1.4. Literature Survey for determination of Vancomycin	24
Chapter 2: Experimental	
2.1. Chemicals	27
2.1.1. Samples	27
2.1.2. Drug solution	28
2.1.3. Reagents	29
2.2. Apparatus	29
2.3. Conductimetric measurements	30
2.3.1. Stoichiometric ratio	30
2.3.2. General procedure for conductimetric determination of drugs under consideration	31
2.3.3. Factors affecting the end point of conductimetric titration of investigated drugs with ammonium reineckate, potassium ferrocyanide, cobalt thiocyanate, nickel thiocyanate and sodium nitroprusside.....	33
2.3.3.1. Effect of solvent	33
2.3.3.2. Effect of temperature	33
2.3.3.3. Effect of dilution of titrand and titrant	34

2.3.4. Conductimetric determination of the investigated drugs in pharmaceutical preparation	35
2.3.4.1. Procedure for tables	35
2.3.4.2. Procedure for vials	35
2.3.4.3. Procedure for eye drops.....	35
2.3.4.4. Procedure for lotion.....	36
2.4. Preparation of ion-pairs	36
2.4.1. Effect of pH on the solubility of ion- pairs.....	37
2.5. Atomic absorption spectrometer studies	38
2.5.1. Preparation of standard solutions	38
2.5.2. Calibration of the atomic absorption spectrometer	39
2.5.3. General procedures using AAS method	39
2.5.4. Determination of the characteristic concentration and detection limit of the investigated drugs	41
2.5.5. Determination of the studied drugs in dosage forms using AAS	42
2.5.6. Determination of the studied drugs in urine using AAS	42
2.6. Absorption spectra of the studied drugs using potassium ferrocyanide as inorganic reagent	43
2.6.1. Effect of acid concentration	43
2.6.2. Effect of time and temperature	43
2.6.3. Effect of sequence of additions	44
2.6.4. Effect of reagent concentration	44
2.6.5. Stoichiometric ratio	44
2.6.6. Interference.....	45
2.6.7. Working procedure	45
2.6.8. Analytical applications	46
2.7. Pharmacopial and official method for analysis of studied drugs.....	46

Chapter 3: Results and Discussion

3.1. Conductimetric measurements	48
3.1.1. Stoichiometric ratio	48
3.1.2. Determination of the investigated drugs in pure forms, pharmaceutical preparations and urine samples using conductimetric titration	49
3.1.3. Factors affecting the end point of conductimetric titration of investigated drugs with ammonium reineckate, potassium ferrocyanide, cobalt thiocyanate, nickel thiocyanate and sodium nitroprusside.....	50
3.1.3.1. Effect of solvent	50
3.1.3.2. Effect of temperature	51
3.1.3.3. Effect of dilution of titrand and titrant	51
3.1.4. Conductimetric determination of Amik.SO ₄ , Neom.SO ₄ , Tobr.SO ₄ and Vanc.Cl	53
3.1.5. Conductimetric determination of the investigated drugs in pharmaceutical preparations	55
3.2. Composition and structure of the ion-pairs	59
3.2.1. Elemental analysis of ion-pairs	59
3.2.2. Factors influencing solubility of the ion-pairs	59
3.2.2.1. Effect of pH on the solubility of the ion-pairs	59
3.2.2.2. Solubility	61
3.2.2.3. Solubility product	62
3.3. Atomic absorption spectrometric studies	63
3.3.1. Determination of studied drugs in pure solutions using AAS	64
3.3.2. Determination of investigated drugs in dosage forms
