

List of content

Contents	Page
Chapter I	
Introduction	
1.1 Location, Topography and Physiography.....	1
1.2 Accessibility.....	3
1.3 Aim and Scope of the Work	3
1.4 Analytical Techniques	5
1.5 Synopsis on the Basement Rocks of the Eastern Desert.....	6
1.6 Previous Work on the Studied Area	20
Chapter II	
Field Geology	
2.1 Introduction	25
2.2 Metavolcanics	28
2.3 Metagabbros.....	32
2.4 Older Granitoids	32
2.5 Dokhan Volcanics	35
2.6 Hammamat Sedimentary Rocks	38
2.7 Younger Granites	40
2.8 Ring Complex	43
2.9 Dykes and Veins	45
Chapter III	
Petrography	
3.1 Metavolcanics	50
3.1.1 <i>Metabasalts</i>	50
3.1.2 <i>Meta-andesites</i>	51
3.1.3 <i>Metadacites</i>	53
3.1.4 <i>Metapyroclastics</i>	54
3.2 Metagabbros	55
3.3 Older Granitoids	57
3.4 Dokhan Volcanics	63
3.4.1 <i>Intermediate Dokhan volcanics</i>	63
3.4.2 <i>Acidic Dokhan volcanics</i>	65
3.4.3 <i>Pyroclastics</i>	67
3.5 Hammamat Sedimentary Rocks	67
3.5.1 <i>Conglomerates</i>	68

3.5.2 <i>Greywackes</i>	68
3.5.3 <i>Siltstones</i>	70
3.6 Younger Granites	70
3.6.1 <i>Syenogranites</i>	70
3.6.2 <i>Alkali feldspar granites</i>	75
3.7 Ring Complex	79
3.7.1 <i>Feldspathoid-bearing syenite</i>	80
3.7.2 <i>Quartz syenite</i>	80
3.7.3 <i>Volcanics</i>	82

Chapter IV

Structure

4. 1 Introduction	84
4.2 Primary Structures	85
4.2.1 <i>Layering</i>	85
4.2.2 <i>Flow Structure</i>	85
4.2.3 <i>Vesicular tops of lavas</i>	87
4.2.4 <i>Pillow structure</i>	87
4.2.5 <i>Bedding</i>	87
4.2.6 <i>Lamination</i>	88
4.2.7 <i>Graded bedding</i>	88
4.3. Secondary Structures	88
4.3.1 <i>Folds</i>	89
4.3.2 <i>foliation</i>	89
4.3.3 <i>Joints</i>	91
4.3.5 <i>Faults</i>	103

Chapter V

Geochemistry

5.1 Introduction	113
5.2 Materials and Methods	113
5.3 Geochemistry of Metavolcanics	114
5.3.1 <i>Chemical classification</i>	114
5.3.2 <i>Magma type</i>	117
5.3.3 <i>Tectonic setting</i>	117
5.4 Geochemistry of Metagabbros	119
5.4.1. <i>Chemical classification</i>	121
5.4.2 <i>Magma type</i>	121
5.4.3 <i>Tectonic setting</i>	123
5.5 Geochemistry of Dokhan Volcanics	123

5.5.1 Petrochemical characters	130
5.5.2 Geochemical classification	131
5.5.3 Magma type	131
5.5.4 Tectonic setting	133
5.6 Geochemistry of Hammamat Sedimentary Rocks	134
5.6.1. Geochemical classification	139
5.6.2 Tectonic setting	139
5.6.3 Provenance (source rocks)	139
5.7 Geochemistry of Granitoid Rocks	141
5.7.1 Petrochemical characters	146
5.7.2 Geochemical classification	150
5.7.3 Magma type	152
5.7.4 Tectonic setting	154
5.7.5 Origin and petrogenesis	157
5.8 Ring Complex	159
5.8.1 K/Rb and Rb/Sr ratio	161
5.8.2 Chemical classification	161
5.8.3 Magma type	164
5.8.4 Tectonic setting	164
Chapter VI	
Radioactivity	
6.1 Introduction	168
6.2 Field Gamma-ray Radiometric Survey	170
6.3 Laboratory Gamma-ray Radiometric Analyses	176
6.4 Geochemistry of U and Th in the Studied Granitoid Rocks and Pegmatites	181
6.4.1 Distribution of uranium and thorium in the studied granitoid rocks	181
6.4.2 Distribution of uranium and thorium in the pegmatites.....	184 185
6.5 Uranium – Thorium Relationships	
6.6 Factors Controlling U Distribution in the Studied Younger Granites and Pegmatites.....	188
Chapter VII	
Summary and Conclusions	195
References	206

List of tables

Table number	Page
Chapter I	
Introduction	
1.1 Classification of the Egyptian Shield rocks	13 16
1.2 Classification of the Egyptian granitoids	
Chapter III	
Petrography	
3.1 The modal analyses of the studied older granitoids	58 71
3.2 The modal analyses of the studied younger granites	
Chapter IV	
Structure	
4.1 Frequency distribution of the main directional trends of joints in the various rock types	93 105
4.2 The main characteristic features of fault sets	110
4.3 Comparison between the frequency distribution of joint sets, fault trends and wadi lines	
Chapter V	
Geochemistry	
5.1 Major oxides (wt%) and trace elements (ppm) analysis for the studied meta-volcanics	115
5.2 Major oxides (wt%) and trace elements (ppm) for the studied metagabbros	120
5.3 The average chemical analyses for the studied metagabbros compared with the average of some Egyptian and world gabbros	120
5.4 Major oxides (wt%) and trace elements (ppm) for the studied Dokhan volcanics	126 127

5.5 CIPW norms and some geochemical ratios for the studied Dokhan volcanics	
5.6 The average of major oxides (wt%) of the studied intermediate Dokhan volcanics compared with some average data reported by some authors	128
5.7 The average of trace elements (ppm) of the studied intermediate Dokhan volcanics compared with some average data reported by some authors	128
5.8 The average of major oxides (wt%) of the studied acidic Dokhan volcanics compared with some average data reported by some authors	129
5.9 The average of trace elements (ppm) of the studied acidic Dokhan volcanics compared with some average data reported by some authors	136
5.10 Major oxides (wt%) and trace elements (ppm) analysis for the studied Hammamat sedimentary rocks	138
5.11 The average of major oxides (wt%) of the studied Hammamat sedimentary rocks compared with some average data reported by some authors	142
5.12 Major oxides (wt%) and trace elements (ppm) analysis for the studied granitic rocks	143
5.13 CIPW norms and some geochemical ratios for the studied granitic rocks	144
5.14 The average of major oxides (wt%) for the studied granitoid rocks compared with the some Egyptian and world granitoids	144
5.15 The average of trace elements (ppm) for the studied granitoid rocks compared with the some Egyptian and world granitoids	160
5.16 Major oxides (wt%), trace elements (ppm) and some geochemical ratios for the studied wadi Dib ring complex ...	162
5.17 The average of major oxides (wt%) and trace elements (ppm) for the studied wadi Dib ring complex compared	

with the average data reported by Hassan et al. (1997)

.....

Chapter VI

Radioactivity

6.1 Field gamma-ray radioactivity (ppm)for all rock types exposed in G. Milaha area	172
6.2 Radiometric analyses of the studied rocks	179
6.3 U, Th, some trace elements and major oxides for the studied older granitoids, younger granites and pegmatites	182
6.4 Average uranium and thorium as well as Th/U ratio in the studied pegmatites compared with those in other pegmatites	186
